

QA Engineer

The Role

Currently working remotely

We need a QA Engineer to join us and help us take our tech offering to a new level. This is an environment that offers challenging work that can make a difference. As the QA Engineer, the ability to work with the software development team and support both our web and mobile applications. The ability to influence quality at all stages of the project, driving continuous improvement and getting involved with requirements, including design and testing will be paramount to the success of a QA Engineer in our business. This role will require a logical and structured approach to task prioritisation, whilst also monitoring systems, applications and vulnerabilities to ensure they are up to quality standards. This role is predominantly based in London but currently working remotely.

- Work with the software development team
- Support our web and mobile applications
- Influence quality at all stages of the project,
- Drive continuous improvement
- Design and testing
- Demonstrate a logical and structured approach
- Monitor systems,
- Define and implement test strategy
- Proactively keep abreast of industry developments,
- Share information, ideas and best practice
- Challenge and influence our developers
- Test planning, documentation and requirement writing

The Person

Your commercial experience coupled with your knowledge of at least one unit testing framework(e.g. XUnit, NUnit, JUnit, TestNG) will be essential to any successful application. We need you to bring demonstrable knowledge of working with an agile development team (SCRUM, Kanban etc). With strong written ability and excellent communication skills, you will be comfortable engaging with colleagues at all levels. We are also looking for applications from people who have had previous exposure to at least one scripting language (e.g. Java, Python, bash or Lua). QA Engineer's in our business have a desire to work with Automated testing (e.g.Selenium, Python, Jenkins), and solid experience with defect tracking, Bugzilla, Jira. If you have web programming knowledge (HTML/CSS/JavaScript), or are qualified ISEB or ISTQB (Foundation or higher), then we would really appreciate hearing from you.

The Company

Circus Street is a training organization that builds digital and data capability for the world's leading brands. The learning programs we develop equip teams with the tools and knowledge to work more effectively with colleagues, partners and customers. Circus Street is delivering global programs to more than 200 companies around the world, training learner populations that range from 1,000-100,000+ users. We combine award-winning animation, interactivity and professional presenters to deliver highly engaging and effective content. Our dedicated account management team delivers customized learning programs and we combine this with a broad marketing and business transformation curriculum, written in collaboration with independent expert practitioners. We are trusted by more than 200 'Fortune 500' brands. Circus Street was founded in 2009 in our London head office, and now employs more than 100 people across our global sites in New York, Austin, Singapore and Sydney.

At Circus Street we are committed to building a culturally diverse workforce, a place everyone can belong. We therefore operate an equal opportunities recruitment policy and welcome applications from all individuals regardless of their background or current status.
