

Fuel Connections Service

TANK MONITORING | FUEL MANAGEMENT | VISIBILITY

Every C-Store, fueling station, or any other business operation that sells fuel products needs accurate and timely inventory monitoring and automation. Most fuel systems function independently of other store systems such as Point-of-Sale (POS), business back-office management, security systems, etc.

Acumera Fuel Connections Service puts critical fuel levels from every site into our network monitoring dashboard where your team can monitor fuel levels alongside other store systems. Store owners, distributors, and dispatchers can easily see when fuel inventories are about to be exhausted, if tanks are experiencing leaks, or if there's water in a tank.

For fuel retailers, proactive-access fuel monitoring saves them time and money in fuel management and inventory costs.

Access Fuel Connections Service from any web-enabled device.

CLOUD-BASED FUEL APPS

Fuel Connections Service is one of many fuel retail software apps in the AcuVigil™ Dashboard's app catalog. It also connects to the fuel telematics systems to prevent unsecured third-party systems from accessing your store network.

Fuel Apps

FireStream

FuelQuest

Intellifuel

PDI Fuel

Pilot

Tanks

TelaPoint

Titan FuelCloud

Benefits

- Reduces operational costs with real-time fuel inventory monitoring from your network dashboard
- Simplifies load filling across multiple locations
- Makes fuel ordering and dispatching more efficient
- Provides a secure, PCI compliant ATG firewall
