

INTERNAL VULNERABILITY SCANNING SERVICE

Address security risks before they can impact your IT systems

Acumera's internal vulnerability scanning helps you to quickly identify vulnerabilities in your network so you can address them to prevent breaches and cyberattacks, like ransomware. Our service:

- Provides you with a high-level view of systems that need remediation and of your overall digital environment health
- Shows you the device-level vulnerability details on individual systems for targeted patch management of business-critical systems
- Gives you the name, NVT OID, CVSS score, description and affected systems to help you identify and patch critical vulnerabilities right away
- Supplies you with the proprietary threat level per vulnerability for patch prioritization and vendor support
- Aggregates the results for you and displays them in Acumera's AcuVigil™ dashboard
- Summarizes for you any enterprise-wide vulnerabilities and calls attention to device- and vendor-sharing vulnerabilities
- Enables you to download your monthly scan results for additional analysis and reporting
- Allows you to review the detection and remediation rates across the organization
- Lets you monitor for device presence to ensure missed scans begin when a device reattaches to the network
- Supports you with a 24x7x365 team of experts to guide remediation efforts
