

## MANAGED BROADBAND SERVICE

### Removes the headache of broadband management

Acumera's managed broadband service provides fast, reliable and cost-effective network connectivity to maximize uptime and avoid processing disruptions. We source, provision, manage the break-fix process as well as consolidate all your internet service provider (ISP) bills into a single invoice.

As part of our managed broadband service, Acumera:

- Researches and selects the fastest, most cost-effective broadband (internet) service for your needs
- Orders, configures and provisions broadband services for each of your sites
- Manages the billing relationship with each ISP and only sends you one bill for all your sites
- Provides proactive, 24x7x365 network support and monitoring to keep your service up and running
- Handles any break-fix issues with the ISP to save you time and get your network back online as soon as possible
- Gives you uptime reports for each site through our cloud-based AcuVigil™ dashboard
- Enables you to add optional cellular backup (WAN Failover) service for automatic backup network connectivity

When combined with **Acumera's cellular backup (WAN Failover) service**, we manage both your primary and secondary broadband connections and get each location set up for seamless failover and fallback support in the event of an internet outage.
