WEB FILTERING SERVICE

Blocks viruses, phishing and malware

Acumera's web filtering service shields your business against threats by managing internet traffic, filtering content and blocking malware, phishing and viruses. Safeguard your network with effective, reliable protection that's easy to set up and maintain.

With our web filtering service, you get:

- Proxy and DNS-based filtering to limit internet access via blacklisting, whitelisting, content blocking and SafeSearch features

- Protection against malware, phishing and viruses

- Flexible policy creation and management through a web-based interface

- Full suite of predefined reports on user or group activity plus viewing of real-time activity

- Exceptions to the general internet policy via cloud keys for single or multiple users

For increased protection, pair web filtering with Acumera's **external vulnerability scanning service** and prevent cyberattacks and unauthorized network access.
