CHANNEL WIN

Security Health Assessment

Our expert team of cyber security engineers assess networks for existing vulnerabilities and provide points of action to remediate any holes in security platforms.

Why Thrive's Security Health Assessment?

- Assess external vulnerabilities

- Review internal security of current platforms and networks

- Create an actionable list of vulnerabilities prioritized by risk

- Analyze your security program and governance

- Review current security software suite compared to the objectives of your security strategy and compliance requirements

- Review configurations and the efficacy of your current program

"

We have a customer in the education vertical that needed help with benchmarking their security posture. We introduced Thrive for an initial discovery call. On the call Thrive was able to demonstrate a deep knowledge of the education space and how their SHA service could benefit the customer. We are happy with their approach and how they addressed our customer. The biggest advantages we found was their knowledge of the education vertical and how they demonstrated a road map for the customer's security journey.
