

WINDOWS AUTOPILOT

by CDW

Time is precious. So how can you better manage your time while securing your IT environment and maximising your Microsoft investment?

Windows Autopilot by CDW provides a faster, cloud-driven way to deploy and configure the Microsoft Surface range of Windows 10 hybrid tablets and touchscreen laptops, saving your IT team valuable time and resources.

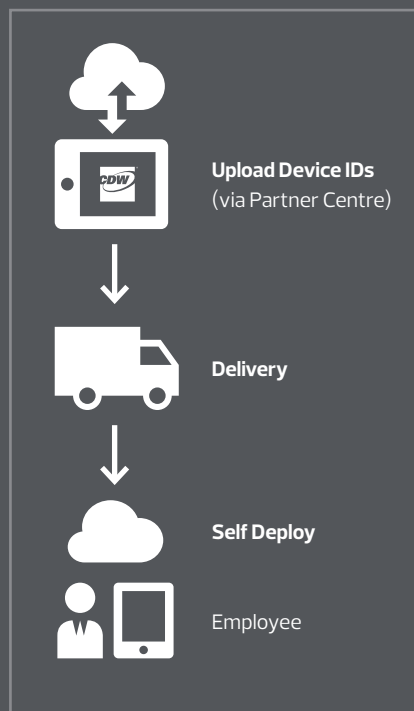

Using Azure Active Directory (AAD) and Mobile Device Management (MDM) to manage and configure the Surface devices, CDW can deliver directly from our 120,000 square foot world class National Distribution Centre in Rugby, UK, to wherever the user is based, with all devices pre-loaded with their individual profiles and the applications they need to do their job.

This means users just unbox and turn on their 'business-ready' Surface device and they are ready to start working immediately. Organisations can now seamlessly deploy an estate of devices across multiple locations, directly to the end users without IT having to touch the devices or requiring on-site presence to set up a device. This provides a seamless experience for the end users, with no enforced gaps in their productivity – something that is especially impactful with the move to remote working where employees still need support but can't deploy devices from a main office.

Autopilot allows organisations to reduce their IT spend on deploying and maintaining devices, and more on innovation and productivity.

How does it work?

1. CDW either provides new device IDs or harvests existing device IDs and uploads them to the Windows Autopilot Deployment Service
2. You enrol the device via Intune or Microsoft Endpoint Manager, assign the preferred device profile and deploy to your end user via your own process
OR
3. CDW enrolls the devices for you, deploys your preferred device profile to each device and ships it directly to the end user. The device is auto configured, and all the user has to do is switch it on, connect to the internet, and Autopilot will download the profile settings to customise their experience.

Benefits

- Autopilot delivers a personalised user experience with none of the hassle of configuring individual devices
- Rather than spending time provisioning and managing an estate of devices, IT can focus on driving the organisation's digital transformation
- As a cloud-based service Autopilot can reduce the overall costs of deploying, managing, and retiring devices

At CDW we pride ourselves on being a perfect fit for your business, with global reach but local expertise. We also understand how important it is to keep your business running optimally, at all times. Therefore, we offer a range of support SLA options which minimise downtime and disruption to your business operations.
