

# LENOVO VIRTUAL ROUNDING

Connect with patients face to face  
- even when you aren't

Care team rounds provide important connection points in the daily routine of in-facility patient stays. Through quick patient status checks, care teams have the opportunity to answer questions, provide updates, and collaborate on care delivery. Lenovo Virtual Rounding preserves valuable face-to-face time, making daily rounds more efficient, convenient, and safe. This purpose-built, Microsoft Teams-certified solution makes secure patient-to-provider sharing easy.

## A room with a "View"

Lenovo ThinkSmart™ View is designed specifically for Microsoft Teams video conferencing. With a compact footprint, it's easily accessible bedside. Clear video and audio make it easy to focus on the conversation. A ThinkSmart View in each patient room is configured for simplicity and patient privacy. Providers can select the patient they want to visit by room number, connecting with one-touch connecting to the View from any location. When the chat ends, Microsoft Teams removes the call history and all personal information from the View\*.

## Mobility

From remote monitoring of vital signs to giving community-based nurses the ability to log and access data from any location, the potential for increased efficiency is impossible to ignore.

CDW can help identify a system of mobility that is adaptable, robust, and cost-effective. As healthcare moves beyond the physical walls of hospitals and health centres, CDW supports the design and deployment of a secure digital workspace which accompanies care providers wherever they are, improving availability and accessibility without compromising security.

## An easy Solution for IT

Does your organisation use multiple video conferencing platforms? No problem. Simply consolidate existing conferencing systems with Teams. And if you're using Microsoft 365, Teams may already be on board!

### Less PPE

Limit the number of times providers need to wear and discard PPE.

### Less infection exposure

Reduce the risk of healthcare associated infections (HAIs) for providers and patients.

### Provider flexibility

Visit all patients without travel time between offices, campus buildings or floors.

### Patient access

Communicate easily with a broader care team, including specialists.

## Why Lenovo and CDW?

Having worldwide partnerships with best-of-breed technology innovators in a range of healthcare sectors allows CDW to serve as an orchestrator. By taking care of selection, due diligence, planning, and budgeting, CDW removes the risks and uncontrolled costs facing healthcare organisations when harnessing smarter solutions that ultimately improve patient care.
