

DREAMING OF SIMPLIFYING YOUR IT OPERATIONS ACROSS HYBRID AND MULTI-CLOUDS?

Struggling to deliver performance at minimal costs to meet business needs? Spinning up a new datacentre, consolidating, or modernising and want to better use existing resources? Grappling to get unified visibility to better troubleshoot and accelerate decision making? Want to better manage risk and stay compliant with IT and industry regulations?

THE STUFF OF IT NIGHTMARES

Clouds as New Silos

Every cloud is different. Each adds to operating complexity while reducing overall control, visibility, and governance.

Migration Headaches

Public clouds have steep learning curves. Hybrid clouds take more planning. Both require you to manually place workloads.

Maintenance Burdens

Set and forget it isn't that simple. Both clouds and on-premises systems need to be monitored and managed, and you still have to troubleshoot them.

Over-Provisioning

Without just-in-time resources to assure application performance, you're likely wasting money on needless infrastructure and missing SLAs.

Unplanned Work

Limited views from siloed infrastructure and fragmented tools make event correlation and root-cause analysis harder in dynamic environments.

Mismatched Skills

Existing IT roles must evolve from doing to showing cloud's value, including giving business and DevOps teams 24x7 dashboards.

Cost Concerns

Declining budgets in the face of increasing demands require IT to optimise workloads and services continuously and more exactly.

Stalled Innovation

Without an agile way to integrate services from multi-clouds and legacy environments, there's little IT time left for innovation.

THE STUFF OF IT DREAMS: VMWARE VREALIZE OPERATIONS

Rely on self-driving operations, which is a simple, yet powerful IT strategy for automating and simplifying operations management. It incorporates machine learning and big data analytics to predict, prevent, and intelligently remediate issues in hybrid and public clouds while keeping infrastructure in compliance – all so your IT team can be more proactive and agile.

Continuous Performance Optimisation

- Automated workload balancing and placement
- Continuous workload placement optimisation for VMware Cloud on AWS
- Host-based placement
- HCI performance optimisation
- Predictive distributed resource scheduler
- Reducing downtime

Efficient Capacity Management

- Reclaim and right-size
- Correlate capacity and cost insights
- Capacity planning
- Lowering costs

Intelligent Remediation

- Unified observability across multi-cloud (AWS and Azure)
- Apps to infrastructure troubleshooting workbench
- 360-degree troubleshooting with metrics and logs
- Native SDDC integrations
- Common packaged apps and OS monitoring
- Speeding time to value

Integrated Compliance

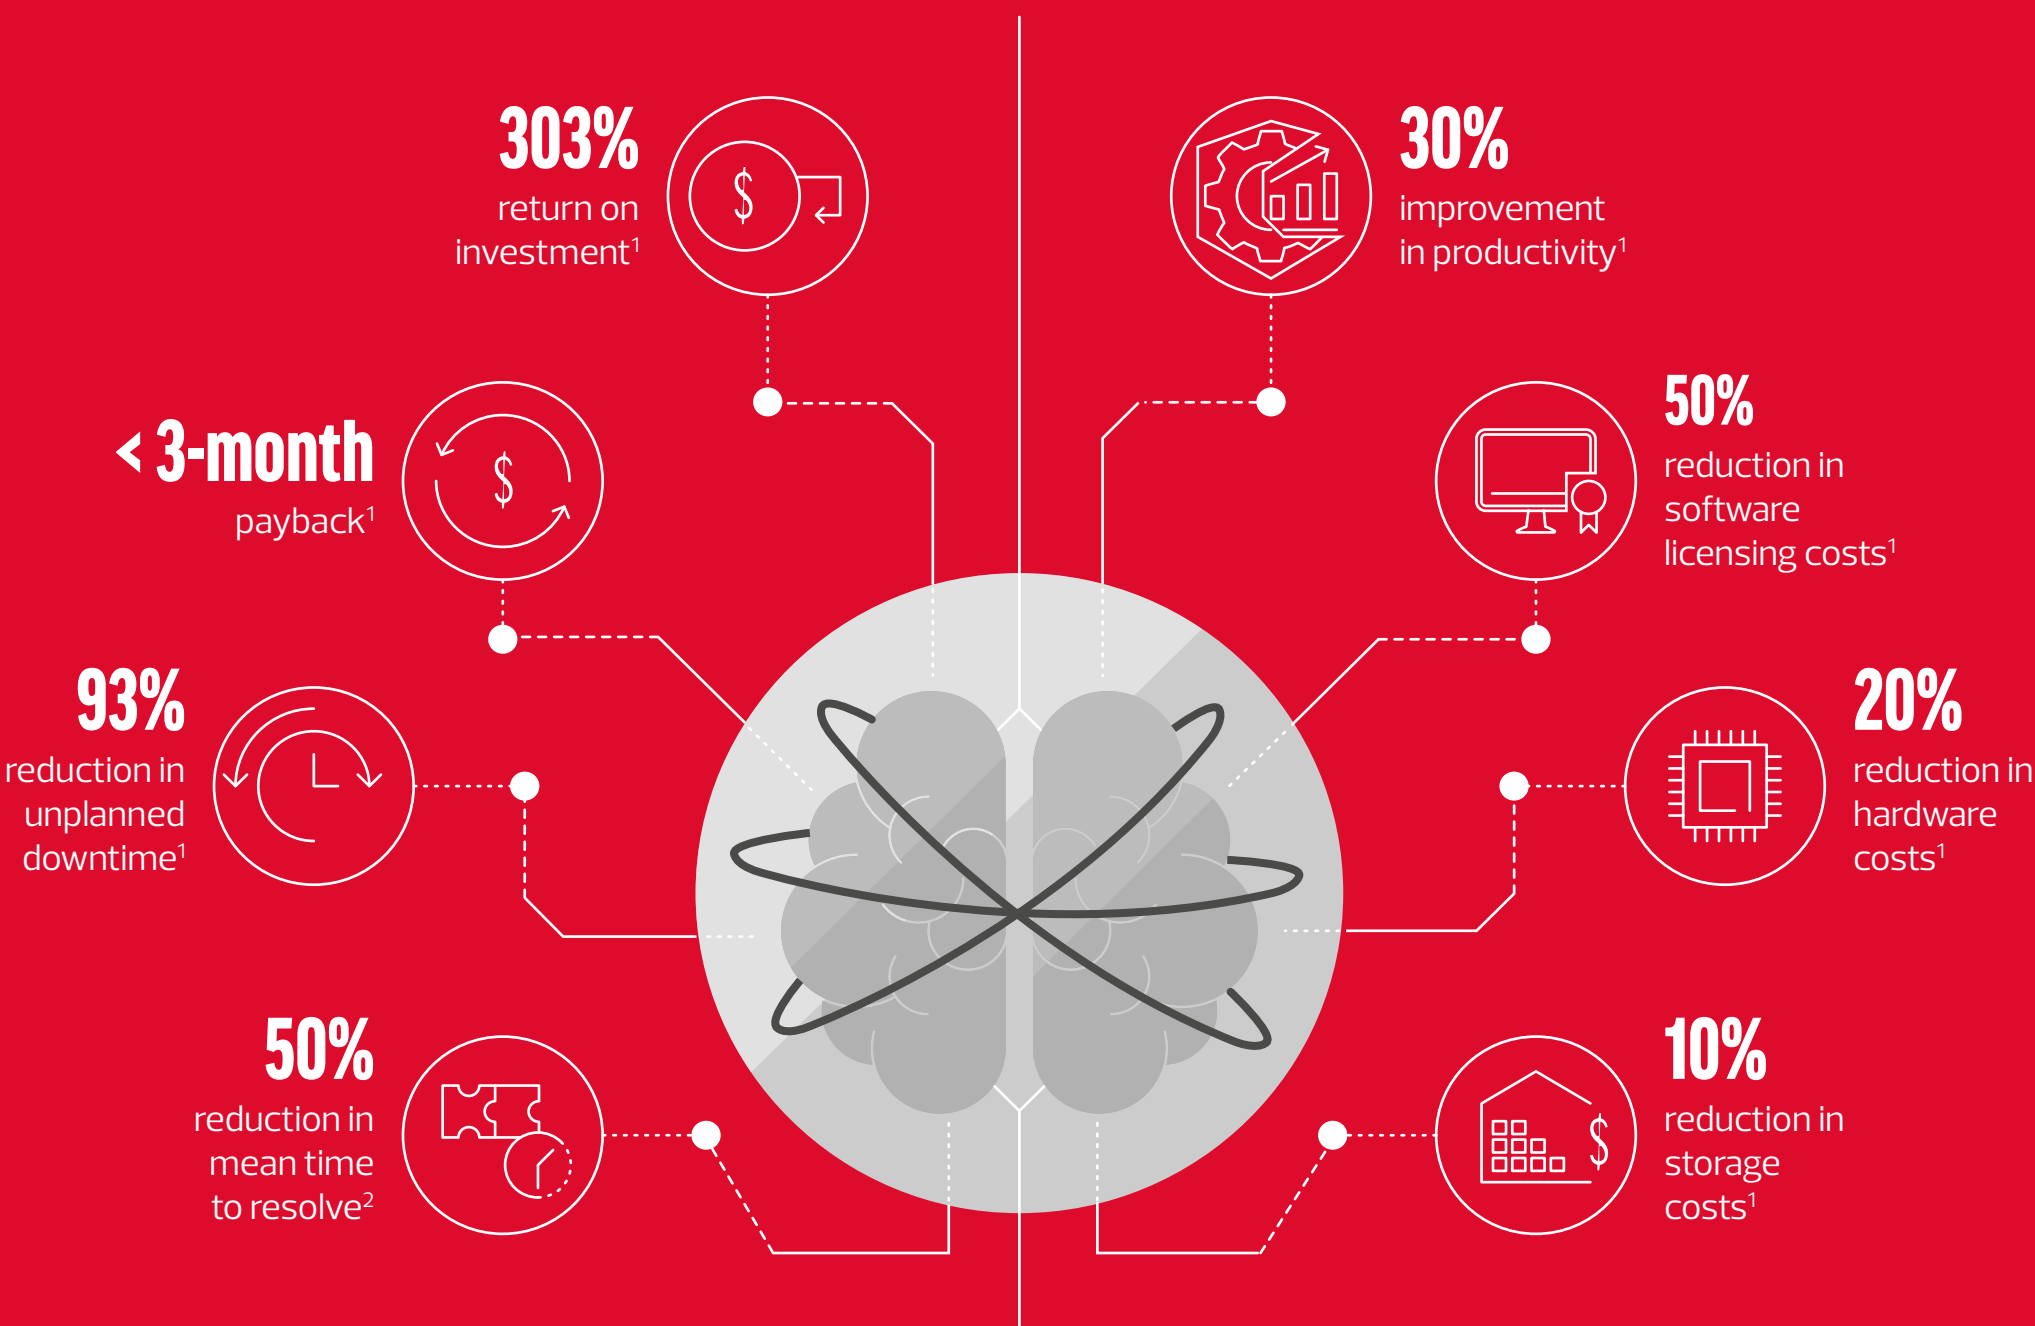

- Hybrid cloud configuration and compliance
- vSphere regulatory compliance
- Automated configuration management
- Improving risk management

Delivered in an open and extensible platform with continuous availability

WAKE UP TO VMWARE VREALIZE OPERATIONS

Don't let IT management get in the way of delivering business value. Run production operations hands off and hassle free with self-driving operations powered by VMware vRealize® Operations™

Realise your IT operations management dream with VMware vRealize Operations.

You need more than the latest technology. That's why CDW works with partners like VMware to find the right solution to suit your organisation. CDW has been designing, implementing and managing technology, communication and security solutions for businesses of all sizes for nearly 30 years. Together, we help organisations to modernise, automate and transform modern workspaces and data centres, using cutting edge hyper-converged infrastructure, cloud-enabled storage, data protection and the latest client devices.
