

Case Study

Prestressed Concrete Planks

Franklin Bridge, Scotchman's Lead, VIC

Client Pain Point.

The old Franklin Bridge was “a relic from the horse and buggy days”. In urgent need of upgrade, the project - jointly funded by Golden Plains Shire, City of Ballarat, and the Federal Government – was awarded to Ace Contractors.

With traffic diversions in place and a tight timeline for construction, Ace required a capable partner to produce the PSC Planks – On Budget, On Spec, and On Time.

Solution.

Having used Modcast previously for supply of PSC Planks, and being confident with technical capability, Ace made the call to see if the timeframe and budget could be met. Modcast committed.

Outcome.

The PSC planks were again delivered On Budget, On Spec and On Time.

Client Feedback.

As part of its continual improvement process, Modcast invites, values, and implements constructive feedback from its clients.

Ace were able to provide constructive feedback on how some parts of the production process could be fine-tuned for the next project. Onwards & Upwards!

Product:

PSC Planks

Project:

Franklin Bridge, Scotchman’s Lead

Client:

Ace Contractors / Golden Plains Shire

Size:

11 & 14m long

Weight:

Average 11 tons each.

Quantity:

33 Units.
