

# Accessible Rubber Pathways for Adult Living Communities

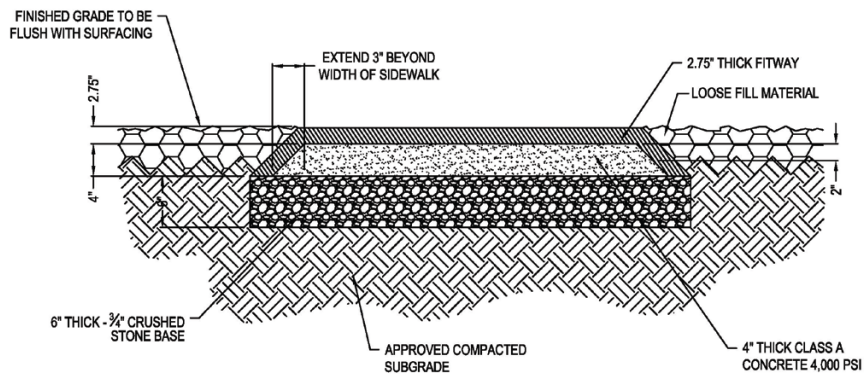

FitWay™ Rubber Surfacing Pathways were developed for active seniors and to support increased physical activity in assisted living communities. FitWay systems create a natural looking path with added attenuation to help prevent serious injuries. Developed with similar technology as compliant playground surfaces, FitWay was designed to withstand repeated traffic from mobility devices and provide a softer landing surface.

## WHAT IS FITWAY?

- 2 layer system including a specialized attenuation bottom layer and unique top course layer
- An effective, long-lasting, attenuating alternative to standard walking surfaces (concrete, natural earth)
- A durable pathway for seniors to follow and maintain activity levels on a safer surface

## WHY FITWAY?

- Developed in conjunction with senior care professionals
- Provides cushion to help prevent serious injury
- Highly accessible and inclusive for all
- Built to withstand mobility devices and traffic patterns
- Design, logo, and color options available
