

How-To Use the Break-Even Calculator

1 - Miles and Rates

In the first section, enter the miles you would like to drive, and at what rate per mile you would like this month. This will calculate the gross revenue you will earn.

Revenue	\$
Miles	
Rate per Mile	\$

2- Total Variable Per Mile Cost

Next are your variable expenses, broken down per mile. This will calculate the total variable per mile costs you will incur for the month, based on the total miles you entered in the first section.

Variable Cost Per Mile	Expense Per Mile
Driver Pay	\$
Fuel	\$
Maintenance	\$
Tolls and Permits	\$
Other Cost	\$
Total Variable Cost Per Mile:	\$
Total Variable Expense:	\$

3 - Fixed Costs

Lastly, enter your fixed costs for the month.

The bottom three rows will automatically calculate your Net Revenue, Total Expenses, and how many miles you need to drive to Break-Even for the month.

If your net revenue is not meeting your expectations, try adjusting the top section, updating the miles and rate per mile.

Fixed Cost Per Month	Amount
Truck Payment	\$
Trailer Payment	\$
Insurance	\$
Parking Rent	\$
Dispatch Pay	\$
Truck Registration and HUT	\$
Other	\$
Total Fixed Cost Per Mile:	\$
Total Fixed Cost:	\$
