

PURCLEAN™ DIRECT FEED KIT

Features:

- Improved wash quality by preventing growth of bacteria in storage tanks
- Eliminates odor caused by stagnant water in storage tanks
- Allows the holding tank to store fresh water and be used as bypass when necessary

The PurClean Direct Feed Kit is designed to keep wash water in the recirculation loop by direct feeding high pressure pumps. This prevents the rapid growth of bacteria and eliminates the odor in the wash process.

PurClean Direct Feed Kits are available in three sizes, 1 inch, 1 1/2 inch and 2 inch. Please contact us when considering sizing options.

Note:

We strongly recommend using brass fittings with the Direct Feed Kit plumbing. This method is recommended for factory or field modifications. At times, field modifications do not allow this based on site install conditions.
