- Initial seeding and large-scale recovery with physical shipping

##### Recovery Options

- Wide range of recovery options: entire machine, ESXi configuration, single files and folders, databases, Office365 mailboxes, etc

## Acronis Cyber Protect Cloud with Net3

### NET3 TECHNOLOGY'S FAVORITE FEATURES:

Acronis Backup Cloud can do both On Site and Cloud backup - at the same time. The AES-256 encryption is an optional feature as backups are not encrypted at rest by default. With protection of data on 20+ platforms with the ability to recover to dissimilar hardware including bare-metal, physical virtual and cloud environments, Acronis Backup Cloud is a very versatile solution.

Acronis also has the ability to run a Virtual Machine directly from the backup storage without having to move or recover the files. It lets you bring a machine online quickly in your virtual environment, then move that virtual machine onto production storage during a planned maintenance window.

### Granular Recovery of Exchange & O365

- Exchange and Office 365
- Calendars
- Mail Data
- One Drive Files
- Contacts
- SharePoint Data

### Granular Recovery of SQL Database Level Restoration

You have the ability to do VMware replication of virtual machines between hosts along with run virtual machines directly from backup storage with Acronis Instant Recovery. The recovery process of vm's is very easy - even when recovering from physical machines into a virtual environment.

If you have any questions about Acronis Cloud Backup and how to successfully implement it into your Data Protection plan, contact us at [sales@n3t.com](mailto:sales@n3t.com) or Request More Info.
