HAMMERTECH

PROJECT CONTROLS

Compare Planned vs. Actual Hours and More...

Schedules, Estimates, and Forecasts can be compared against jobsite tasks to validate planned vs. actual start, finish, deliveries, equipment, resource hours and more.

Use Live and Historical Data for Improved Planning

Leverage real-time and historical project data including incidents and labor hours for project planning and improved risk quantification and mitigation. Understand the "true" cost of estimates and schedules.

Reduce Insurance Premiums and Risk

Strengthen risk management. Reduce insurance premiums with risk ratings by work type. **Win more jobs, avoid delays, and reduce costs.**

Prequalification Reduces Incidents

Prequalified workers are 60% less likely to have injuries and incidents.

Pre-Qualifying workers, subcontractors and vendors before they reach the site **reduces incidents and job costs**.

INCREASE PRODUCTIVITY BY UP TO

43%

We Believe Project and Jobsite information should be accessible to **ALL project stakeholders including planners, schedulers, estimators, and project controls.**

Lowering injury rates **increases jobsite performance.**

2 million+ active HammerTech jobsite workers in safety, risk, and compliance projects see an **increased productivity rate by as much as 43%.**

Project Stakeholders have **real time jobsite information across multiple sites, multiple subcontractors and workers.**

Identify issues before they occur. **Increase scheduling, controls and forecasting accuracy** with jobsite to back office KPI's.
