

Platform to Automate Patient Assessment & Behavioral Health Engagement, Remotely

Measure Outcomes | Monitor Treatment | Maintain Patient Engagement

COVID-19 is transforming the way in which we must now deliver remote, connected care

The outbreak of COVID-19 (coronavirus) is placing health systems across the country at a breaking point. Centers and providers are now facing overwhelming demand with limited resources and fighting an increased need to address behavioral health issues despite existing challenges around access and engagement exacerbated by the COVID-19 pandemic.

NeuroFlow can help your organization support patients and improve resource allocation during times of crisis

Complements telehealth solutions by supporting remote monitoring and engagement getting the right people to the right resources

Delivers evidence-based tools and resources that provide update reports and outcomes tracking to address the behavioral health of patients and help them cope with anxiety, stress, and social isolation.

Enables remote triaging and risk stratification so you can properly allocate resources and care.

Currently Used in Hundreds of Clinical Settings & Trusted By:

The Complete Behavioral Health Solution
