

Psychiatric Collaborative Care, Made Easy

NeuroFlow's market-leading solution provides the technology and staffing to successfully implement sustainable collaborative care at scale.

Make the Collaborative Care Model Work for Your Business

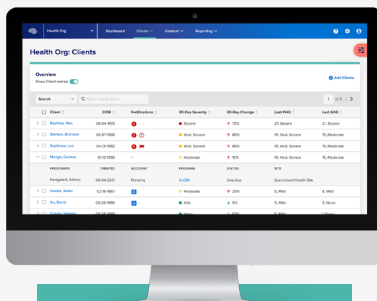

The Psychiatric Collaborative Care Model (CoCM) is the most effective evidence-based integrated care model for behavioral health, validated by more than 90 randomized controlled trials. CoCM enables a holistic team-based approach to treating common mental health conditions by integrating behavioral health professionals into the care team, increasing provider confidence and competence in treating these disorders.

While the clinical effectiveness of CoCM in managing higher acuity patients is backed by years of research, it traditionally comes with high costs and a long ramp-up time. NeuroFlow's solution for CoCM combines technology and services to drive results quickly and cost-effectively, via a flexible business model with the potential to put fees at risk (eg. shared savings).

CoCM Supercharged with Industry-Leading Technology and Staffing Support

Patient app for remote screening and ongoing engagement

Cloud-based registry for seamless, real time patient management

Optional:
Psychiatric Consultant
Staffing

Optional:
Behavioral Health Care
Manager Staffing

Best-in-class technology purpose-built for CoCM drives patient engagement, real time collaboration, and workflow efficiencies

Staff augmentation allows for immediate implementation and scaling without relying on in-house hiring and training

1

Universal remote assessments and bulk invites quickly fill your registry, as AI-based risk stratification identifies CoCM-eligible patients for enrollment by the PCP and BHCM.

2

Evidence-based digital health activities and ongoing assessments keep patients engaged and care teams informed.

3

Industry-leading cloud based registry enables real time patient panel monitoring and collaboration between BHCM and psych consult.

4

PCP receives the high priority info for billing directly in the EHR, including cumulative tracked time and associated billing codes.

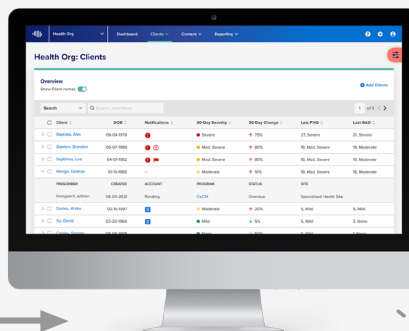

5

As patients graduate from CoCM, NeuroFlow's registry is the only on the market that allows you to continue monitoring and supporting patient wellbeing.

PATIENT

Caseloads are filled quickly through population-wide invites to the NeuroFlow app.

BEHAVIORAL HEALTH CARE MANAGER

No more clunky spreadsheets or systems ill-equipped to manage CoCM requirements - NeuroFlow's top-of-the-line registry enables real-time collaboration and patient panel management, with intuitive time tracking and documentation functionality.

EHR integrations and comprehensive reporting keep PCPs informed within their existing workflows.

PSYCHIATRIC CONSULT

Psychiatric consults guide treatment recommendations through caseload reviews and curbside consultations.

MEDICAL PROVIDER

6:1 ROI for treating depression through Psychiatric Collaborative Care

(AIMS)

67% of CoCM patients see a 50% reduction in PHQ score within 4 to 8 months using NeuroFlow

(NeuroFlow client data)

Proven to fill a Behavioral Health Care Manager's caseload in as short as one month

(NeuroFlow client data)
