### Get Started or Optimize.

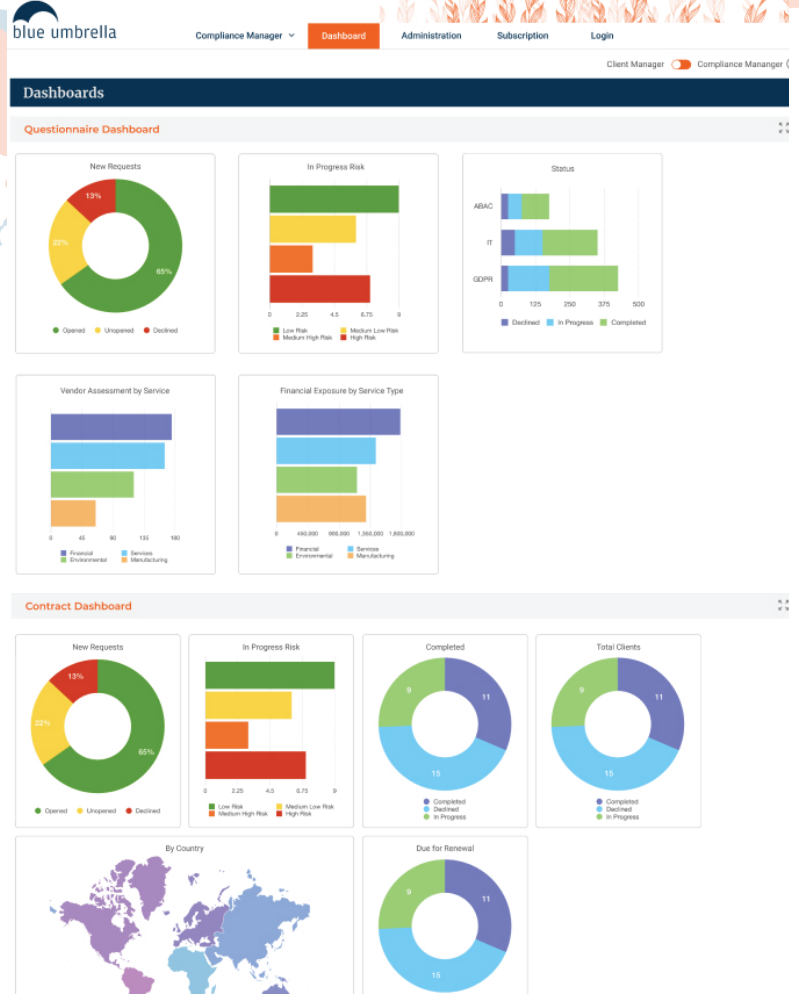

Deployed on a secure and user-friendly platform, Blue Umbrella GRC is a cloud-based technology built for organizations that are establishing or digitizing their third-party risk management program and are looking to drive collaboration across business units.

Best of all, our simple setup process means you can be up and running within minutes. Literally.

### Best in Class Risk Assessment.

Before you allow a third party access to your organization's data, ensure they have the appropriate data security, privacy, storage and data access controls to protect your organization and minimize financial and reputational damage.

Based on the GDPR standard, our risk assessment questionnaire covers topics related to organizational roles, policy and processes, privacy by design, use of third parties, incident response and management, and compliance documentation – key control fail points that require attention and documentation.

### Integrated Workflows. Centralized Data.

Blue Umbrella GRC provides pre-defined workflows that simplify, centralize and reduce the complexity related to sending risk assessments, reviewing the results and flagging identified third-party data privacy risks. This ensures that your organization can establish and document remediating actions - *all in one place*.

### Safe, Secure and Supported.

Blue Umbrella GRC leverages industry best practices to transmit, secure and store your data. Additionally, our client success team provides world-class support for when you have a question or need guidance.
