About Mobius Labs

Mobius Labs creates next-generation AI-powered computer vision technology that is disrupting how the world works with visual content.

We make it easy to add Superhuman Vision to any application, device or process with our Few-shot Learning models that are fully customized to think like you do. New models can be generated easily, without the need for any prior AI knowledge, and run locally on edge devices requiring little processing power and storage. Delivered as an SDK, our technology ensures that you keep your data private.
