

VenioOne has taken email threading to the next level by introducing an Email Thread View that now allows you to **see email communication chains visually** with color coding for email replies and forwards, **clearly indicates missing emails**, and even **generates missing email content** based on other emails in the communication thread. There are three email thread views: All, Collapsed Missing Emails, or Inclusive Only.

DO YOU KNOW WHICH EMAILS ARE MISSING?

The screenshot displays the VenioOne email threading interface. At the top, it shows 'Results: 1 - 20 of 6609 Threads(Thread View)'. A red box highlights the 'Expand All' button, with a callout stating 'one click to expand or collapse all'. Another red box highlights the 'Page Size' dropdown menu, with a callout stating 'three email thread views'. Below the list of email threads, a red box highlights a warning message: 'An email which is part of this conversation is missing. The email may not have been collected or the email does not have 'metadata' to link it to this email thread.' A callout below this warning states 'warning when missing emails are detected'.

File Id: 0 **An email which is part of this conversation is missing. The email may not have been collected or the email does not have 'metadata' to link it to this email thread.**

warning when missing emails are detected

Viewing Email Threads

- When selecting a parent node, child nodes are selected automatically.
- If emails are generated by VenioOne, that is clearly indicated.
- Emails icons and text are both color coded.

Results: 1 - 20 of 622 Threads(Thread View) **Generated Emails : 7** Ingested Emails : 721
