Redefining Discovery

Experience a Review Solution for Scaling

VenioOne Review is a web-based review solution that is intuitive yet powerful enough for the smallest to the largest sets of data. The built-in dashboards and advanced analytics, including Continuous Active Learning (CAL), ensure that the review project is managed intelligently, quickly and with the best outcomes possible.

- Unified Review
- Advanced Analytics
- Customizable Workflow
- User Friendly Interface
- Dashboard Management
- Additional Features

VenioOne Review is built to handle any case, from a simple one reviewer case to multi-party litigation and everything in between. VenioOne's batch-based workflow drives productivity through an efficient and comprehensive review process.

- Customizable workflows optimize review and reduce time and clicks
- Promote data to review without exporting or importing
- Permission-based, multi-level reviewer rights
- Privilege review and Priv Log workflow
- Flexible redaction set management
- Real-time dashboards to track progress, analyze reviewer quality, performance, estimated cost and time to completion
- The latest in machine learning technology
- No third-party applications required
- Leverage the Venio Query builder to save time
- Term highlighting for search terms and persistent terms

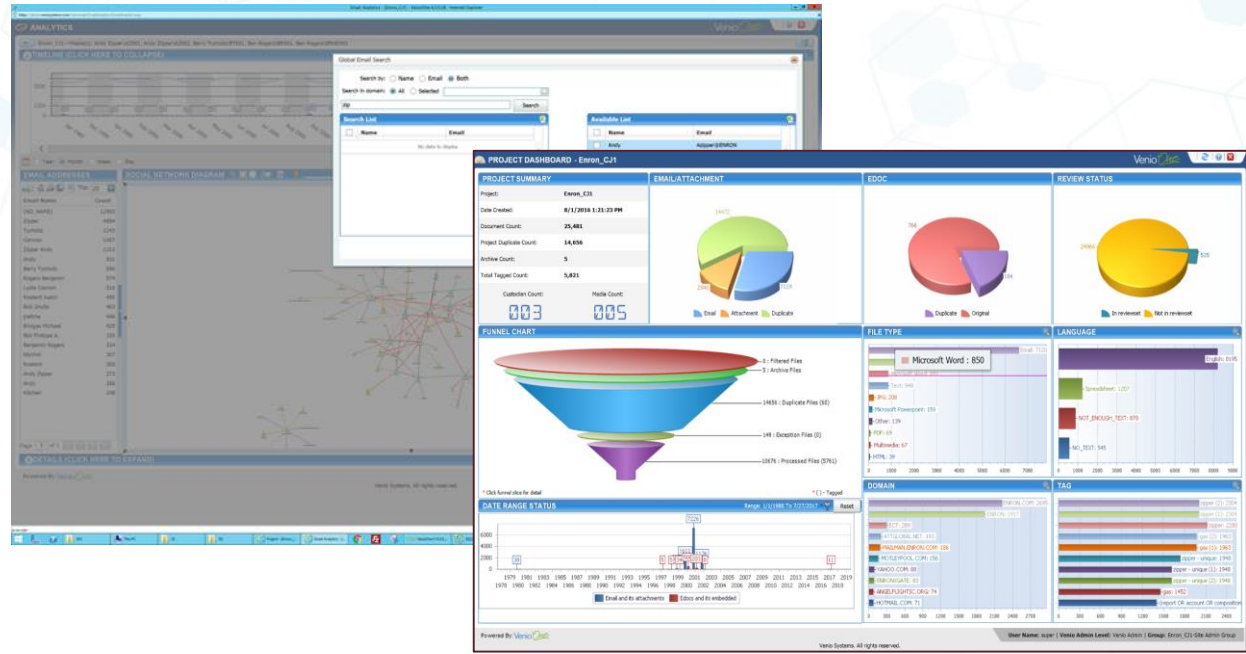

Advanced Analytics at Your Fingertips

Sampling

- Simple workflow wizard to conduct sampling
- QC users work product
- Validate and refine search criteria

Predictive Coding

- Built in workflow to accurately and automatically review documents based on training sets
- Ability to train with existing document set or external text
- Flexible workflow to prepare documents for sampling, tagging, and defining sample sets as examples
- Built in workflow to QC training set and predicted set with ability to view accuracy of the predictive coding models use of Support Vector Machines
- Workflow for multiple iterations of refinement of the training set to obtain optimum accuracy

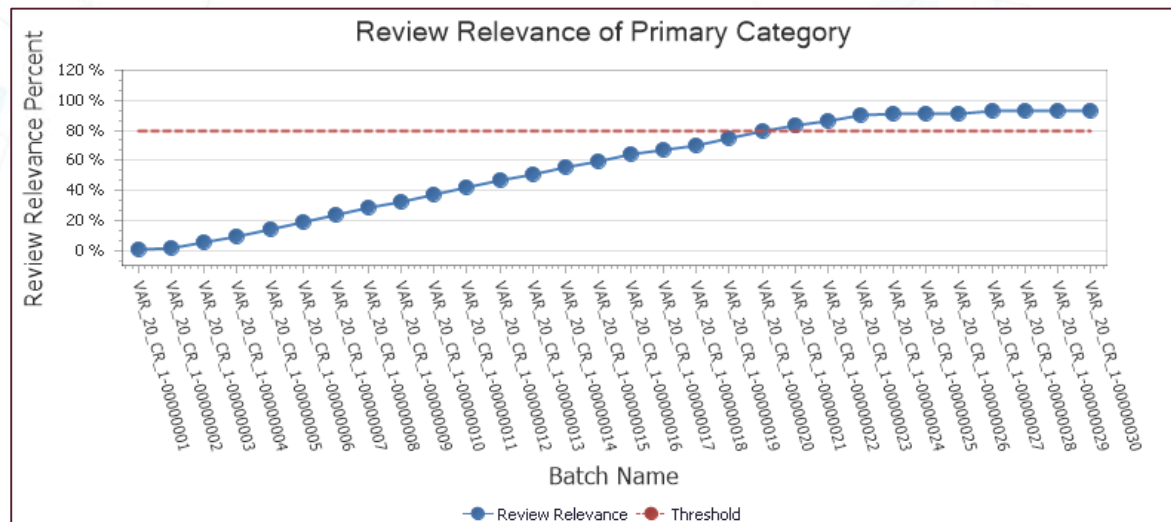

The ability to analyze data is a key strategy for identifying important issues, reducing data volumes and review costs. VenioOne's proprietary analytics are fully unified into the platform, providing seamless transition from investigation to full review. From Early Case Assessment (ECA) to investigating email communications to deeper analysis of search results, VenioOne's visual dashboards provide users a quick and easy way to get a better understanding of their data sets. The ability to automate the review process utilizing the latest in AI technology (CAL) ultimately saves both time and money while ensuring greater productivity.

Continuous Active Learning (CAL)

Continuous Active Learning

- Automated batch-based workflow
- Built on the SVM algorithm
- The machine learns as each batch is checked in - no sample sets are needed
- Reviewers are sent more relevant documents in each batch as the review progresses

On the VenioOne platform, there are a few key steps – (1) a CAL profile is created with documents to be reviewed in the review set, then (2) the reviewers begin to review documents until the defined thresholds are hit. It is during this process that the review and training happen in parallel.

One of those thresholds is Review Relevance Threshold. This is relevant recall target for the case. For example, if your threshold is 80%, then a reviewer only needs to review enough documents to recall 80% of “projected” or “calculated” relevant documents in the case. While the reviewer reviews, (3) the model is also being trained. (4) Reranking is done every time a batch of documents is checked-in, updating the model.

Create a Customizable Workflow

Design What You Need

- Built-in review workflow wizard to guide admins
- Granular controls on a batch level
- Multi-level review options
- Management dashboards to see real-time statistics
- Cost estimator
- Deadline estimator
- Reviewer statistics
- Flexible Tagging
- Dynamic Search Folders

The screenshot displays the 'Admin Review Set Wizard' window within a software application. The window title is 'Admin Review Set Wizard' and it contains a 'PROJECT DETAILS' header with 'Project Name: Enron_C11'. The main content area is titled 'Create/Edit review set and review template' and features several radio button options: 'Create a review set' (selected), 'Edit a review set', 'Delete a review set', 'Create review set template', and 'Edit review set template'. Under 'Create a review set', there are sub-options for 'Create a new review set' and 'Create a clone of existing review set'. Below these is a section for 'Available Review Set Template:' with a dropdown menu and a 'Load' button. A 'Template Note:' section shows 'Template note not available'. At the bottom, there are 'Previous' and 'Next' buttons, and a prompt to 'Click "Next" to continue.'

The Venio platform has the ability to uniquely customize and tailor the review workflow. Unlike other solutions, we define and automate the workflow up front. This allows users to easily re-use the batching templates for multiple cases.

Designed with the User in Mind

Flexible User Interface

- Easy to highlight and redact information
- Customizable review layouts based on conditions and permission
- Ability to add, arrange, and pop out information panels on the fly
- Intuitive visual interface for email

The screenshot displays the VenioOne Review Interface. At the top, a document table lists items with columns for INTERNAL_FILE, CUSTODIAN_NAME, RELATIVE_FILE, FAMILY_DATE, ORIGINAL_FILE, EMAIL_FROM, and EM. Below the table, the 'File Id: 2' view shows an email with a 'Confidential' redaction box. The interface includes several panels: 'Meta Data/DBFields' on the left with fields like Custodian, Language, From, To, CC, BCC, Subject, Date Sent, Attachment, MessageID, Sensitivity, and Importance; 'MessageThread' below it; and 'Parent/Child' at the bottom left. On the right, the 'TAGS/CODING' panel is open, showing 'System Tags' (Responsive, Non-Responsive, Privileged, Confidential) and 'Coding' fields (Priv_From, Priv_Title, Priv_To, Priv_Type). A 'Tag Comments/History' panel at the bottom right shows a list of tags and their application dates.

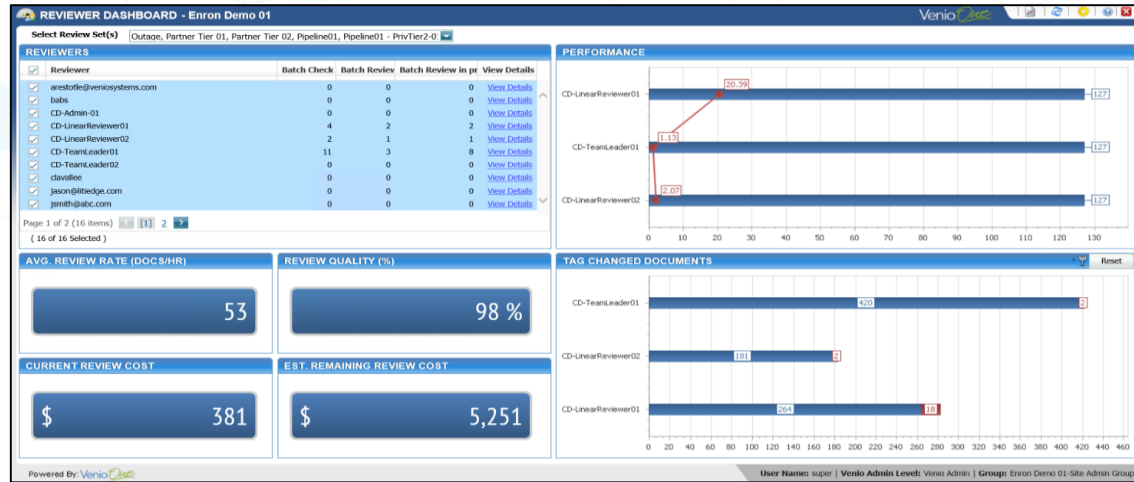

VenioOne's Review Interface is built to be intuitive and easily customizable based on the users' needs and permissions.

See Results During Review

Dashboard Management

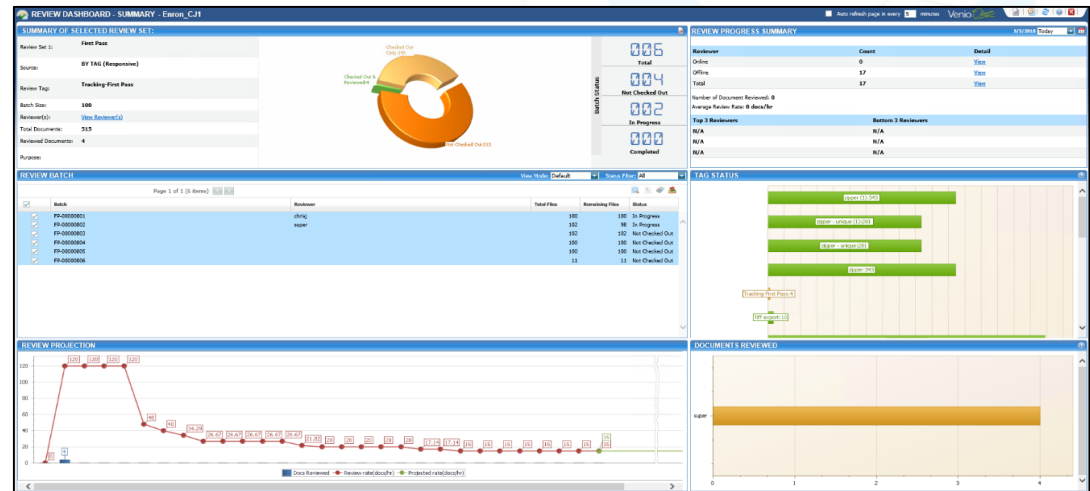

Three interactive dashboards that provide information snapshots at any time:

- Project dashboard
- Review-set dashboard
- Reviewer dashboard

Analytics, Filtering, Tagging

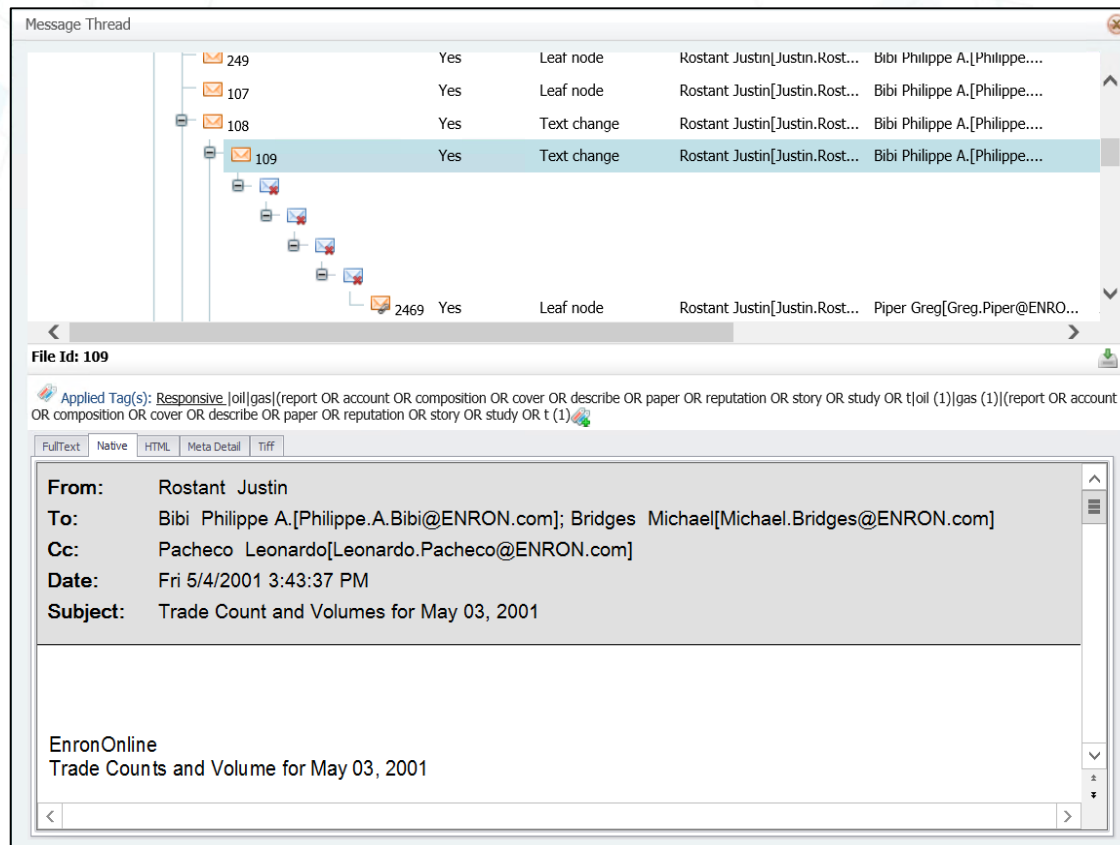

- Email analytics to quickly understand the size and nature of a data set
- Filtering to cull down the data set
- Tagging of key documents for review

We Don't Stop There

Additional Features

- Email Threading with inclusive thread identification
- Near-deduping
- Multiple search tools including: List searching, Fuzzy, Wildcard, Synonym
- Tiff on the fly
- Over 70 pre-built reports
- Customizable API (Applets)
- Dynamic and Static Deduping
- 3 Search result view options
- Venio Touch integration (Mobile Project Management)

VenioSystems

Redefining Discovery

About Venio Systems

At Venio Systems, we are dedicated to working with our trusted partners to bring the latest legal technology innovations to law firms, agencies, and corporations. We provide e-Discovery solutions that streamline and improve the litigation process for our clients and partners, allowing them to achieve the most successful outcome possible while saving time and resources.

Experience the VenioOne difference with our unified platform that powers every phase of e-Discovery: processing, early case assessment, legal analysis, culling, review, and digital production. Our VenioOne OnDemand self-service solution provides users an agile and easy to use system throughout the litigation process.

Bring all phases of e-Discovery from processing through production under one platform with VenioOne.
