

Lightning Fast End-to-End eDiscovery SaaS

Key Benefits

Managed Secure Cloud Delivery

- Onboard clients, cases, and users without waiting
- License only what you need, when you need it
- Highly available, secure and fully managed cloud-scale infrastructure

Lightning Fast Processing

- Up to 10x faster processing (up to 10 TB/day)
- Simultaneously process multiple media and job types
- Reorder jobs with no data loss or rework

AI-Powered Review

- Powerful alternative to high cost review-only solutions
- Auto-collection for tiered reviews
- Native redaction, email thread view and mobile data visualization
- TAR/CAL reduce data to be reviewed up to 90%

Interactive Analytics

- Actionable insights with dashboards
- Sample data for strategic data analysis or quality checks
- Visualize email gaps and communication patterns

Venio Cloud, an end-to-end eDiscovery SaaS (Software-as-a-Service), enables legal and investigative teams to turn millions of documents across virtually any media type or file format into meaningful information that's most relevant to your case.

With its cloud-native design, enterprise-level security, lightning fast processing, AI-powered technology assisted review (TAR/CAL), and deep analytics, Venio Cloud is the fastest and most secure technology for all your eDiscovery needs, from Ingestion-to-Production. Because it's built on Amazon Web Services (AWS) and is fully managed by us, you no longer have to deal with the complexities of provisioning and deploying servers, networks, or storage. This makes your team several times more productive as they can focus on more value added activities rather than tedious and manual tasks like upgrading applications and applying security patches.

Venio Cloud has enterprise grade security built into the eDiscovery platform that provides an additional layer of safety over the legendary security features and processes in AWS to give you the peace of mind that your data is stored safely behind firewalls and multi-layered security protocols.

Onboard new clients and cases within minutes and get up to 10x faster results and 10x higher ROI without having to manage expensive infrastructure, people, or licenses!

Key Features

Fully Managed, Secure Cloud Delivery

Focus on your business, add new clients and cases of any size and complexity, and deliver value to your customers without worrying about the security, availability, and performance of your eDiscovery platform. Venio's team maintains the Venio Cloud eDiscovery software and secure cloud-scale infrastructure, so you can service your customers while leaving tedious tasks like managing servers, staff, and storage to us. License only what you need, when you need it, benefiting from Venio's economies of scale for lower cost.

With Venio Cloud's built-in two-factor authentication, highly granular user rights management, encrypted passwords and other sensitive information, VPN-controlled access, and data transfers secured by SSL, you can rest easy knowing that your customer's data is fully secured while being highly available.

Lightning Fast Processing

Process up to 10 TB of data per day with Venio Cloud and scale to process petabytes of data across thousands of cases and users. With the platform's ability to simultaneously process multiple media, custodians, and job types, handle hundreds of types of data, and intelligent error handling, your team can handle more cases leading to higher team productivity. Reorder or pause processing jobs with no data loss or rework, so juggling ever-changing priorities won't cause missed deadlines.

AI-Powered Assisted Review

Venio Cloud includes native, full-featured, self-learning, and easy to use review capability for linear and batched review, as well as TAR and CAL. As reviewers begin reviewing, our machine learning engine reduces case data by up to 90% to surface what matters most in your case or investigation.

Email thread views easily identify missing or deleted email content while our social network diagram provides a broad visualization of communications with the ability to drill down into individual conversations. Auto-collection enables tiered reviews and logical tagging makes legal review teams more productive and efficient.

Highly Automated Operations

Get up to 10x higher team productivity by cutting time spent on tedious tasks, such as new case creation, tag and coding setup, review set generation, imports, exports and production. Customizable and automated workflows enabled by out-of-the-box wizards and templates ensure consistent and efficient processes from ingestion through production. This automation and guided workflows also leads to predictable quality and outcomes every time no matter who performs the task.

Interactive Analytics

Venio Cloud analytics dramatically reduce costs both by decreasing the amount of data moved into review and providing additional tools for reviewers.

Gain immediate insights and enable rapid ECA and culling through interactive, customizable widgets and layouts. Sample data to ensure your collection is complete and strategies are working. Visualize the flow of email communications and merge duplicate email addresses before drilling into the details. Identify key custodians or actors, potential alias email addresses, and time gaps by using our interactive Timeline and Social Network Diagram, a spider web view of interconnected email nodes.
