Leaning Manufacturing Operations With Mobile Solutions

The world is moving mobile but many manufacturers have been left behind with few solutions to address their business needs with mobile technology… until now!

Mobile technology offers the ease of use and flexibility needed to improve shop floor data collection and make critical decisions about inventory ordering, job scheduling, and achieving on-time delivery. Managing enterprise data using paper-based systems and spreadsheets slows down processes, increases errors, and creates data that is unreliable and out of date.

Data-driven decision making is revolutionizing manufacturing and accurate, real-time data is essential to make this transition.

Bezlio is dedicated to providing mobile solutions to existing mid-market Enterprise Resource Planning (ERP) systems to improve shop floor data capture and the decisions supported by that data. Our intuitive mobile interfaces enable users to step away from kiosks and into the 21st century with mobile technology.

In this ebook, we will discuss the value of adding mobile technology to your manufacturing process and the value that brings to the whole enterprise.

Modern Manufacturing Relies On Modern Technology

Today's market is very competitive and companies of all types are leveraging technology to give them an edge. Take a look at any industry and you will see that the market leaders are the ones that most effectively utilize the next generation of technology.

How many times have you been shocked to find out that Amazon knew a purchase you would make before you did? By collecting and utilizing accurate data, they are able to achieve their organizational goals. Technology is embedded in all facets of our modern life, here are a few reasons why your company should invest in modern technology:

Today's market is very competitive, and brands constantly UP their game, so they aren't left behind. One key component that determines if your brand stands out is technology. Technology impacts all facets of life; below are few reasons you need to implement modern technology:

Faster transaction entry:

The saying time is money has a lot of truth to it, and the less time used in entering data, the more time that can be dedicated to more productive activities. With mobile technology you can do many things faster. You can capture delivery data more quickly, record purchase order receipts, and even track inventory quickly and easily.

One example of this is in cycle counting. All companies want accurate inventory, but relying on a paper based system for counting can be a long and tedious process and it provides ample room for human error. With Bezlio's mobile solutions you can streamline this process and easily collect data in real-time and count more accurately. By reducing the time associated with cycle counting, inventory can be more accurate leading to improved on-time shipments and reduced waste.

Modern Manufacturing Relies On Modern Technology

More cost-effective, easier training:

For many companies, one of the reasons that they are hesitant to deploy new technology is the concern around implementation and training. But many modern technology solutions can actually simplify the process for employees. This is especially true when that technology is something they are used to, like mobile technology. Mobile devices are cost-effective and more familiar to users than scanners. This familiarity shortens training time, so you can get up and running with your new technology more quickly.

Increased productivity and better employee engagement:

Spending a small amount of money to scale up a business has always been a smart decision for any company. By optimizing the speed of data entry you can transform that time savings into increased productivity. This investment in Bezlio makes life easier and quicker for your staff, providing them with ample morale booster and positive energy.

Mobile Solutions Offer Fast Adoption And Ease Of Use

Mobile technology is becoming a popular choice for many manufacturing companies looking to add technology to the arsenal of tools they use everyday. Choosing the right technology to achieve your goals can be a confusing choice. Mobile technology is easy to use, delivers many benefits, and can be accessed on mobile phones and tablets.

Here are a few of the benefits adding mobile technology can bring to your business:

1

Accurate data

Mobile technology reduces human error during cycle counts and purchase order receipts. Scanning barcodes with a mobile device is quick and easy and it builds a real-time data set that can be used to prioritize scheduling and automate reordering.
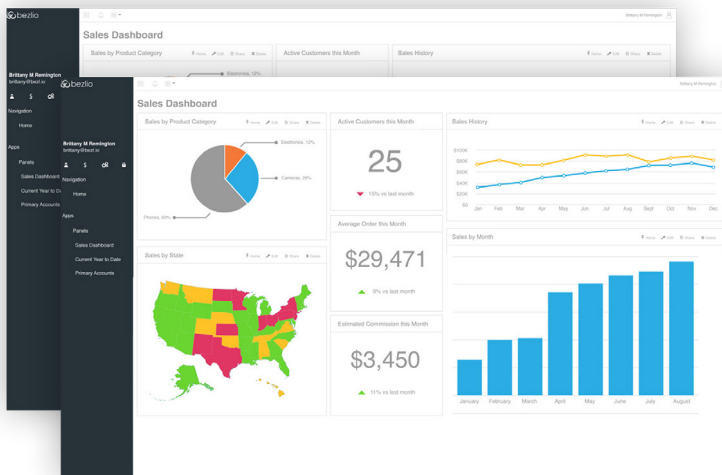

2

Strengthen customer relationships: Supply Chains

Mobile technology allows sales teams to access data to set more accurate timelines for deliverables. This access to accurate inventory data is vital to setting expectations with your customers and building a reliable brand that customers will choose to interact with long-term.

Accessible ERP data allows manufacturing leaders to see proper inventory levels and make data-driven decisions based on availability and real-time demand. This data enables brands to accurately increase or decrease production to meet their client's needs.

Bezlio is a mobile app that provides mobile teams with custom screens and dashboards that allows access to ERP data in real-time on any device, so all team members can access the data they need when their customers need it.

Mobile Solutions Offer Fast Adoption And Ease Of Use

3

Lowering Operating Costs is the key to streamlined processes

Accessible real-time information is the cornerstone of meeting goals. Information is key, and it helps save time and money; that is why you must be aware of the entire state of your company.

Bezlio helps in creating next-generation ERP management apps that offer inventory management tools that can be accessed anywhere.
The ease of use, combined with constant accessibility, allows employees to plan their deals, organize deliveries, and meet customer demand instantly. This also lowers operating costs as manufacturing is optimized based on inventory and demand.

Also, simplifying the cycle count process makes it easier for employees to find inventory, record inventory transactions, keep operating costs down and customer satisfaction up.
4

Forecasting with precision saves time

Forecasting is essential in the growth of every brand, and that is why you must have accurate data to enable you to forecast better.

Forecasting with precision helps keep operating costs down and builds a positive customer experience as items are delivered on time. Using accurate data for forecasting is essential, and this data needs to keep up in real-time so that when accessed, it is accurate.

With remote work becoming a new reality, accessing data outside the office is vital to keeping forecasting estimates up to date. More work is completed off-site than ever before as more of the workforce has moved to remote working locations. That is why Bezlio creates a customized system to keep up with data, enabling you to forecast with precision.

# Mobile Solutions Offer Fast Adoption And Ease Of Use

5

Prioritizing projects is the cornerstone of optimized manufacturing

When you can visualize what needs to happen next, you can plan effectively and meet your goals based on accurate data. With accurate data, companies can prepare for what is to come and prioritize projects ensuring optimized manufacturing.

Bezlio adds mobile capabilities to midsize manufacturing companies and covers warehouse management capabilities to increase inventory accuracy. Simplifying cycle counts results in more accurate forecasting, better inventory planning, and cost containment.

Additionally, Bezlio records transactions like material movements, material-to-work orders, receiving purchase orders, and receiving finished goods into real-time inventory. Many companies enter these transactions later, which means their inventory may be incorrect. Bezlio uses barcodes to record these transactions, which speeds up the process and ensures better accuracy by eliminating errors.

Bezlio
Mobilize Your ERP

Bezlio is dedicated to increasing the efficiency of data collection to ensure companies can optimize their operations and maximize profit. With over twenty years of experience working with manufacturing companies, we understand the importance of optimizing data entry, creating intuitive mobile designs, and increasing productivity.

Our solutions help overcome the following challenges:

Lack of data visibility:

It is not a secret that mistakes on shop floors generally result in money loss and frustration. Without 24/7 access to real-time data, the production team is stuck and wastes a lot of precious time. With a Bezlio optimized ERP system, everyone stays connected to real-time data, making sure everyone works efficiently with the data they need.

Scheduling and Forecasting:

If a company works on inaccurate data, it won't create a proper schedule or accurately forecast its business. With Bezlio's real-time transaction enablement, you are sure of accurate data to schedule confidently.

Incorrect Data:

Humans are prone to errors no matter how careful they are, and when there are many people entering data, the possibility of mistakes multiplies. Mistakes such as selecting the wrong part or entering in the wrong quantity can impact the rest of the manufacturing schedule and cause major delays. Mobile ERP solutions like Bezlio to eliminate those errors.

Uncoordinated Inventory:

Nothing can be as frustrating as knowing what task you need to complete and not having the materials to do them. If your employees rely on a computer or kiosk to find inventory, it is not easy to find all of the material necessary to complete a job. Bezlio allows you to efficiently find and use the right materials on the go.

Inefficient Tracking:

Moving materials from point A to point B can be difficult, especially when you have to move multiple items. This gets even more complicated when done manually, many issues could occur during this process. The Bezlio system allows you to track inventory with speed, visibility, and control effectively.

Bezlio
Components and Features

All of our solutions feature easy to use searchable interfaces and are also optimized for barcode entry. You can mix-and-match solutions to build the perfect mobile experience for your team.
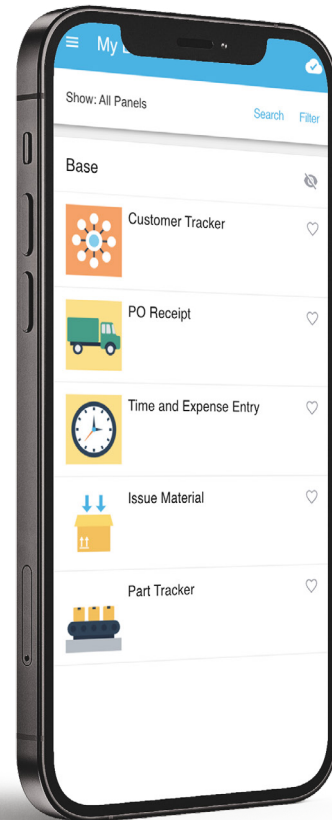

Material Handling

Improving material handling begins at the **Purchase Order Receipt.** Quickly receive and stock inventory and use **Location Transfer** to keep inventory locations accurate. This allows employees to quickly locate the right parts and **Issue Material** to production. Use the **Finished Goods Receipt** to record finished goods inventory and **Cycle Count** to ensure inventory accuracy.

Labor Tracking

Accurate tracking of employee labor is some of the most important and costly shop floor data to collect. Whether you use **Time Clock** or **Time Card** style labor collection, we have a solution for you.
Access Anywhere

Inside your four walls or anywhere in the world, Bezlio can give your team access to key **Customer** or **Part** information on any mobile device.

How Bezlio Helps Companies Like yours?

Improved data accuracy, less downtime, better quality control, and more precise inventory tracking are only a few of the benefits mobile technology has brought to manufacturing. When access to data is available to employees in remote locations, additional benefits include easier pricing, improved delivery accuracy, and better forecasting.

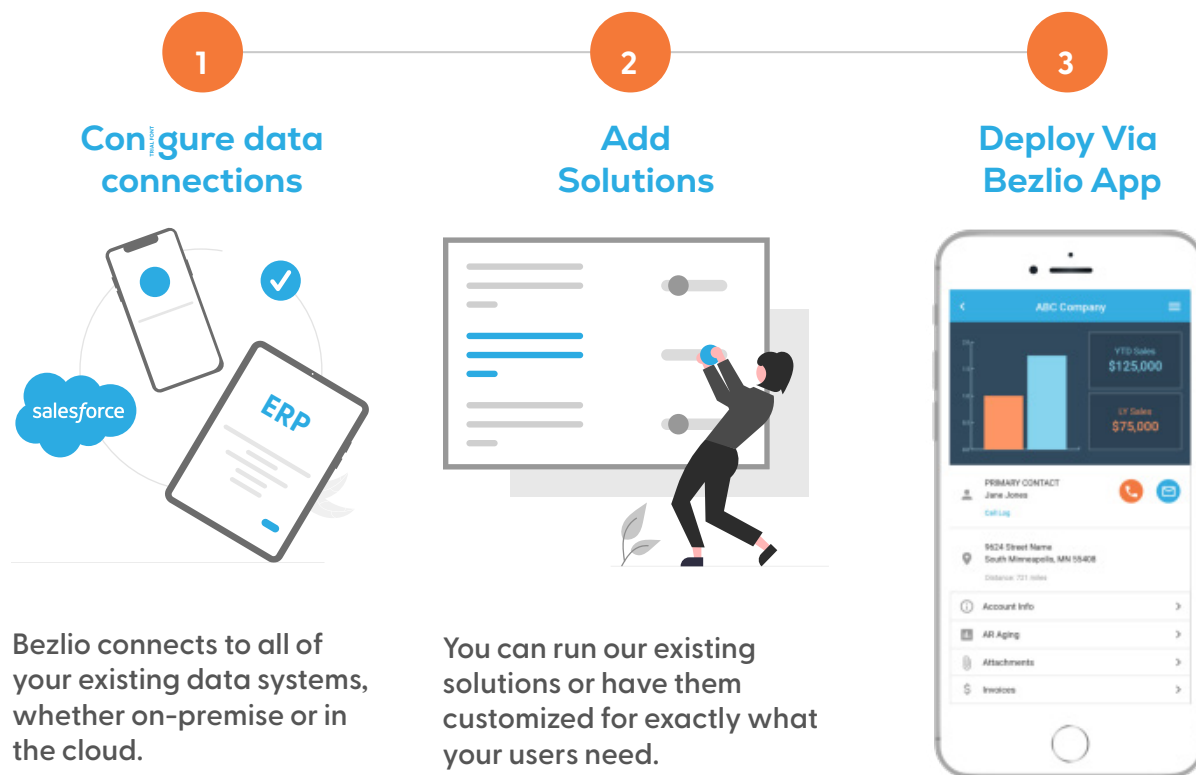

Bezlio is a cloud-based mobile platform that provides users with secure mobile solutions built to extend the capabilities of our customer's ERP software. Our production ready solutions are designed to support these systems without additional integration which means that implementation is quick and training is painless. Our unique mobile solutions can also be tailored to your specific needs and our team of experts can help you design the perfect solution for your needs. In just weeks, employees can become mobile empowered and the company can begin to benefit from the mobile revolution.

How Bezlio Works

Bezlio enhances your existing ERP system with new native app functionality providing users with easyto-use interfaces which improves accuracy and increases efficiency.

Configure data connections

Add Solutions

Deploy Via Bezlio App

Bezlio connects to all of your existing data systems, whether on-premise or in the cloud.

You can run our existing solutions or have them customized for exactly what your users need.

Bezlio is Enterprise Ready

Bezlio uses a secure cloud communication platform to allow users to access ERP software on mobile devices. The company controls exactly who can use each screen and the data each user can access.

Who needs Bezlio?

Improved data accuracy, less downtime, better quality control, and more precise inventory tracking are only a few of the benefits mobile technology has brought to manufacturing. When access to data is available to employees in remote locations, additional benefits include easier pricing, improved delivery accuracy, and better forecasting.

Production shop floor workers

Bezlio keeps on-site workers efficient and workflows optimized by offering a simple solution for accurate time and materials tracking, smart alerts for inventory and priority, simple workflow customization, material usage, and much more.

Field service workers

Field service workers need to record their experiences, update inventories, view and manage customer data, add notes, and track time and materials.

Field-based engineers

Engineers have to manage a lot of data, and these records must be carefully kept. Bezlio's read/write capability, time tracking, push notifications, and customizable interface help to keep engineers at peak productivity.

Field installation

Because of the time your installers spend at customer facilities doing billable work, it's critical that their time is tracked and centrally located within your ERP. Bezlio allows installers to efficiently manage time, materials, and expenses while customizing workflow and receiving notifications.

Who needs Bezlio?

Field maintenance techs

Because of the time your installers spend at customer facilities doing billable work, it's critical that their time is tracked and centrally located within your ERP. Bezlio allows installers to efficiently manage time, materials, and expenses alongside customizing workflow and receiving notifications.

Sales representatives

Bezlio helps remote and independent reps work off of ERP data-based task lists, note customer interactions to prevent lost data, manage open quotes, view historical data, use device haptics to call/email, and even manage unique sales execution workflows.
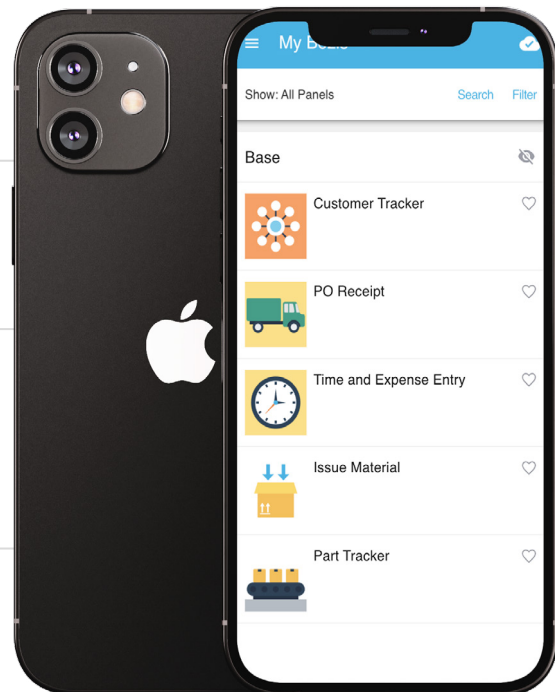

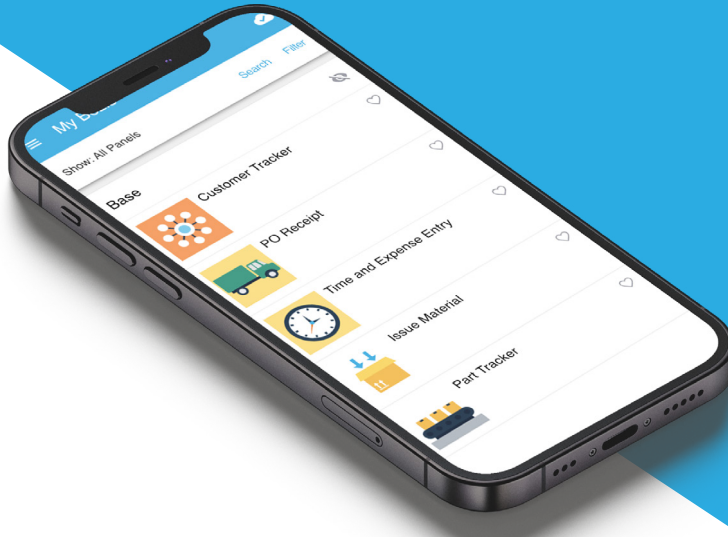

Why Bezlio?

So what makes Bezlio unique from other ERP system software providers?
Apart from our state of the art optimized ERP systems and over 20 years of research to ensure perfection, We can:

✓ Give internal and external stakeholders access to the data they require, so they are always in the know.

✓ Facilitate quicker shop floor entry using mobile devices.

✓ Build real-time data that is accurate and fuels transparency, ignites productivity, and brings teams together—regardless of their geographical location.

✓ Bezlio is a secure, customizable, next-generation data solution.

Ready to Begin Your Transformation?

Interested in implementing a mobile development platform like Bezlio to help better manage your inventory and transactions? **Contact us today,** and we can begin customizing a mobile ERP solution to address your business challenges, or see our website's **Resources tab** for case studies and blogs about our products and services.

ABOUT BEZLIO

Bezlio is dedicated to providing mobile solutions to existing mid-market Enterprise Resource Planning (ERP) systems to improve shop floor data capture and the decisions supported by that data. Our intuitive mobile interfaces enable users to step away from kiosks and into the 21st century with mobile technology.
