ComSource

Security Solutions

Prevent Breaches and Protect Assets from the Inside Out

Turn Possibility into Reality

ComSource delivers technology solutions coupled with financial strategies to bring your business' vision to life.

As an IT solutions provider, we don't manufacture technology, we harness it. Acting as your technology advocate, we're the people behind the technology, designing for you and working with you. With trust, loyalty, and relationships as the cornerstone of our business for over 30 years, let us help you redefine what is possible.

Start Today.

People • Policy • Process • Prevention

With almost every device connected to the Internet, concern around protecting your network and data is at an all time high. You cannot afford to risk unauthorized access or compromise the integrity of your systems. Let ComSource security experts help you prevent breaches before they occur.

Every company needs a detailed security approach to prevent physical and virtual breaches. We can help you ensure that the correct people, defined processes, and effective hardware and software are in place to protect the integrity of both your data and systems.

An integrated IT security approach provides integrity of your data, systems, and company delivering the most comprehensive line of attack to ensure that your people, processes, and technology are aligned to your policy. Let ComSource build a unified security approach covering all physical, network, data, and cyber security controls connecting them across your entire IT network and security policy. At ComSource, our trained professionals will:

- Define policies to establish and maintain network security procedures

- Conduct vulnerability tests to identify risk areas in your IT infrastructure

- Deploy required software and hardware to harden your systems

- Guide and mentor IT staff to recover from any breach

Security Capabilities

Policy Development

We collaboratively document a defined roadmap to secure your entire infrastructure including procedures for staff, networks, data, and applications. Once outlined, our team will conduct periodic audits to ensure compliance with those policies.

Assessments & Audits

ComSource recommends periodic security assessments of your people, policy, and technology to establish and maintain a comprehensive security approach. Auditing your existing IT environment will enable us to map out a full picture of the direct and indirect threats facing your organization.

Vulnerability & Penetration Check

Your network will be tested for potential vulnerabilities through proactive, controlled attempts to exploit gaps or entry points. Exposed gaps will be addressed with suggested remediation and proposed software and/or hardware solutions.

Incident Response

When a breach is detected or even suspected, ComSource will deploy resources to quickly isolate the compromised asset from the network. We know how important it is to save any evidence that may link or identify the intrusion source. Our team will quickly clean-up affected systems and restore any lost data or outages.

Physical Security

Continually maintaining a safe and secure environment, requires proactive planning. ComSource provides training for your staff to enhance their security awareness and, *equally as important*, recommends implementing systems such as surveillance cameras, access controls, and paging and notification systems to safeguard areas your team can't always watch.

Personnel Security Training

To ensure your team can take ownership and maintain the security policy roadmap, our experts will mentor and train the appropriate staff, so they avoid risk and promote security best practices.

Breach Prevention & Resolution

Unfortunately, in the connected world we live in, it's no longer will a breach happen, it's when, and how bad. When dissecting a cyber attack, ComSource will partner will you to build prevention and resolution strategies to properly identify and recover from a data breach, while applying the lessons learned to prevent future attacks.

Post- Incident PR Assistance

After a breach, people both inside and outside of your organization will have many questions. Our experts help craft clear and accurate communications that explain the occurrence in such a way that informs, but also maintains the confidence and integrity of your company's brand image, and reassures C-level stakeholders the proper remediation and prevention steps have been taken.
