Public, Private, and Hybrid Cloud Deployment Strategies

## Turn Possibility into Reality

ComSource delivers technology solutions coupled with financial strategies to bring your business' vision to life.

As an IT solutions provider, we don't manufacture technology, we harness it. Acting as your technology advocate, we're the people behind the technology, designing for you and working with you. With trust, loyalty, and relationships as the cornerstone of our business for over 30 years, let us help you redefine what is possible.

**Start Today.**

## The Journey is Just the Beginning

Cloud computing is driving many IT transformation initiatives and deploying the right cloud-based solutions can give you the computing capabilities to increase operational flexibility, workforce mobility, and employee productivity.

Cloud-based services reduce operating costs thanks to the low upfront investment and ongoing overhead. You can quickly deploy the latest technologies to stay competitive in today's fast-evolving business environment. With a hybrid-cloud approach, you can leverage different cloud solutions from various public cloud providers without being confined to a single platform.

Our multi-cloud strategy will allow you to implement the right mix of public and private cloud services to minimize risk and maximize performance. We'll select the right services and integrate them seamlessly to support your organization's unique vision and business objectives.

# Cloud Capabilities

## Cloud Collaboration Services

Streamline communication and facilitate collaboration to increase productivity and improve customer satisfaction by leveraging a variety of unified communication tools, including VoIP voice calls, video conferencing, instant messaging, file sharing, emails, call center functions, as well as call reporting and analytics.

A well-designed cloud collaboration solution enhances employee mobility and enables teams to collaborate from anywhere. Centralized control functions allow you to simplify and reduce the cost of network management and operations.

## Cloud Data Center Services

Data-driven decision-making is critical for success in today's competitive business environment. However, storing data on-premise using physical servers require specialized environments and a large IT team.

A cloud-based data center and storage solution enables you to process a large amount of data and make it accessible to decision-makers without any massive on-premise infrastructure.

Data privacy is a key concern for businesses. Data breaches and downtime not only have a high financial cost but also many negative long-term impacts on the customer relationships and reputation of an organization. Cloud solutions have the latest cybersecurity measures that are frequently updated to ensure the safety of your information. Comprehensive backup and recovery plans minimize costly downtime that could cripple an organization's operation.

## Cloud Networking & Mobility Services

Our Networking-as-a-Service (NaaS) offering optimizes performance and streamlines IT management with WAN optimization, embedded security, network assessment and monitoring, as well as hyper-converged infrastructures.

To ensure seamless implementation, our experts will partner with your team to assess business and operational risks and craft a customized network strategy for maximizing your investment.

In addition, we provide hosted wireless network solutions to help you increase employee mobility and productivity. We'll design a flexible and scalable architecture to meet your current business needs and support future growth.
