# Networking & Mobility Solutions

Create a Solid Platform to Enable Innovation

## Turn Possibility into Reality

ComSource delivers technology solutions coupled with financial strategies to bring your business' vision to life.

As an IT solutions provider, we don't manufacture technology, we harness it. Acting as your technology advocate, we're the people behind the technology, designing for you and working with you. With trust, loyalty, and relationships as the cornerstone of our business for over 30 years, let us help you redefine what is possible.

**Start Today.**

## Powerful from the Core to the Connection

Your business is evolving. Your IT architecture should be evolving right along with you. You need a network that will enable all forms of rich-media, as well as both wired and wireless devices.

Your network is the backbone upon which all business operations depend. In order to stay competitive, your team requires a reliable, superior networking experience to ensure they all stay connected. Let ComSource show you how to use your network to gain a competitive advantage in today's demanding always-connected world.

Regardless of industry or role, employees are progressively becoming more mobile and require connectivity across devices and media of all forms. Allow ComSource's experts to design and build your complete networking infrastructure that seamlessly and securely integrates data, voice, and video together to:

- Respond to customers, colleagues, and constituents from anywhere, including the office, home, hotel, or any Wi-Fi location.
- Answer a phone call from the desktop or mobile phone as if they were in the office.
- Enforce consistency of business policies throughout the distributed network and protect any user, using any device, from any location, at any time.
- Ready your network for cloud computing, VDI, BYOD, and applications like AI and Machine Learning.

# Networking & Mobility Capabilities

## Route & Switch

Switches are required to establish a network, allowing devices to communicate, and routers exchange data between networks using the best path. Switches and routers are the building blocks for all business communications, from data to voice and video, to wireless access. Gain full access to the business network while ensuring protection of your investment.

## Unified Wireless

Our experts can improve the productivity of your employees by providing them the ability to interact with clients, peers, and management from virtually any location through a unified wireless network. Whether it's a phone call, instant message, video conference or email, you can have full access to your business network using any Internet connection, securely and reliably.

## Software Defined WAN

Improve business application performance and simplify operations with automation and cloud-based management of wide-area networks through a software-defined approach. SD-WAN is a new approach to network connectivity that lowers operational costs and improves resource usage for multi-site deployments.

## Residential Networking (ResNet)

WiFi and Content Programming are no longer a "nice to have" but are critical components to remaining competitive and ensuring a positive guest experience. ComSource's team of ResNet experts will design, implement, and manage your residential network—on campus or throughout your hotel—offloading your IT team to focus on your key strategic initiatives.

## Cloud Networking as a Service (NaaS)

Get your wireless, switching, security, and devices remotely, and centrally managed from the cloud, giving network administrators visibility and control, without the cost and complexity of traditional architectures and on-premises deployments.

## Cloud Wireless

Zero-touch access point deployment and configuration make it easy for you to provide secure wireless networks throughout your business environment. Offload your wireless networking to the ComSource team of dedicated experts to help you plan, implement, and operate your cloud wireless environment.
