

Unified Search Across Unstructured and Structured Content

Data is of limited value if it exists in silos and you can't leverage it easily to drive your business decisions. As enterprises grow, the diversity and volume of data they produce and store in silos grows exponentially, adding to the complexity of leveraging data in a unified way. Further, a huge proportion of this data is unorganized and unstructured – residing in documents, files, communities, chats, emails, etc. The remaining data that is organized and structured is often lying across different tools, repositories, platforms, and databases.

Leveraging read/write capabilities, data mining, analytics, machine learning (ML), and natural language processing (NLP), our solution for Enterprise Search enables unified, fast and intelligent content discovery across all unstructured and structured data sources.

Solution Highlights

Find relevant information with a **single query**, irrespective of where it resides – **scanned documents, images, chat logs, faxes, databases, etc.**

Visualize search results in **interactive formats, correlate data**, and derive meaningful insights

Analyze user search behavior and leverage ML to improve search results, suggest search terms and assess value of searched content

Enable authorized access to secured content, using necessary authentication

ENTERPRISE SEARCH

Seamlessly Access Relevant Information Anytime, Anywhere

About Us

Klera is a software products and services company focused on creating solutions that deliver intelligence from data, unlike ever before. We enable transparent, collaborative, and connected enterprises, without data silos. Our rapid, no code, intelligent application development platform simplifies how you gather, analyze, and synchronize data.

Connect with a wide-range of tools and databases using dynamic, bi-directional, [intelligent connectors](#).
