Klera

Stay On Top of Projects with Critical Metrics and KPIs

In any software project, delivery leaders need to quickly assess their teams' performance, identify bottlenecks and risks, respond to business demands with higher flexibility, and ensure effective controls over cost, quality, time, and scope parameters. While project management software like Jira, Rally, VersionOne, etc., allow teams to efficiently manage their work, they offer limited help in analyzing and correlating the data for effective decisions regarding resource allocation, issue prioritization, backlog grooming, and more. As teams lack a unified view of their projects, they fail to extract their project management software's true value. Klera solves this challenge by offering out-of-the-box and custom project management dashboards to track critical metrics and KPIs. With these unified dashboards, delivery leaders can monitor the work in progress, detect potential risks, and make data-driven decisions to reduce lead time and ensure higher productivity.

Solution Highlights

Track project management KPIs – Identify 'lead' and 'work in progress' times for issues across distributed teams, projects, and more.

Mitigate risks – Assess risks and process gaps, whether using Agile Scrum, Kanban, or Scaled Agile.

Ensure proactive response – Take corrective actions and track improvement trends in an automated way.

Project Management KPIs

Klera

Klera™ is a software products and services company focused on creating solutions that deliver intelligence from data, unlike ever before. We enable transparent, collaborative, and connected enterprises, without data silos. Our rapid, no code, intelligent application development platform simplifies how you gather, analyze, and synchronize data.

Make the Most of Your Project Management Data

Connect with a wide range of tools and databases using dynamic, bi-directional, smart connectors.
