

## Making Efficiency a Municipal Virtue

By using Adlib, a public transit agency merged external and internal pay data into a single pay statement, reducing the cost, time, and errors over their previous manual process.

### THE CHALLENGE

A public transit agency was looking to consolidate PDF-only content from an external source with content from their internal systems into a single pay statement for bus drivers. Around 2,500 pages of internal documents were printed in hard copy, sorted, and assembled for manual distribution every two weeks for 1,200 employees.

They were faced with a number of difficult challenges. This organization needed to:

- Pull together documents from different sources quickly and efficiently
- Reduce the amount of manual error
- Find an alternative to distributing costly hard copies

### THE RESULT

Adlib's solutions excel at enterprise-scale business process automation. In this instance, the customer was able to successfully merge external and internal pay data into a single pay statement, reducing the cost, time, and errors over their previous manual process.

By using Adlib PDF, this government organization was able to achieve a number of benefits:

- ✓ Automation of the entire process: document collection, rendering, and distribution to employees
- ✓ Elimination of human error by automating the document process
- ✓ Savings in time and money by removing the manual workflow

**Advanced Rendering enabled this government organization to automate their entire document-centric payroll workflow, from document collection to distribution to employees.**

### WHAT IS ADVANCED RENDERING?

Advanced Rendering technology takes basic document-to-PDF conversion to a higher level by integrating into the most commonly-used Enterprise Content Management (ECM) systems and automating the conversion of content from multiple sources into more manageable and usable formats to enhance documents at each of the 4 stages of the document lifecycle: capture, manage, archive and deliver.

Adlib PDF Enterprise is the next-generation of Advanced Rendering technology that is ideal for high-volume environments where accurate, scalable and highly-available document-to-PDF conversion and transformation services are required across the enterprise.
