

Scaling for Demanding Enterprise Needs

By using Adlib, an insurance company automatically scanned documents and converted them to HTML for better web performance, and then converted from HTML back to PDF using web services, resulting in greater processing speed, accuracy and searchability.

THE CHALLENGE

A provider of auto, home, business, commercial, life and motorcycle insurance needed to manage growing business demands. They needed to scan up to thousands of property and casualty claims documents per week, converting them first to HTML and then to PDF. The existing manual process was taking 20-30 minutes per document.

They were faced with a number of hard challenges. This organization needed to:

- Process a high document volume on a regular basis
- Eliminate manual processes in favor of automation
- Increase speed of rendering to improve efficiencies

THE RESULT

Unlike desktop or poorly designed PDF-capable applications, Adlib's solutions accommodate high demand conversions encountered in enterprise scenarios such as this one. In this instance, an insurance company realized significant cost reductions and better productivity when converting their documents with Adlib.

By using Adlib PDF, this insurance organization was able to achieve a number of benefits:

- An automated solution addressing end-to-end conversion issues
- Reduction in cost savings and resources
- A marked improvement in conversion time, from 30 minutes to 30 seconds

Advanced Rendering enabled this insurance firm to improve the conversion time for each document from 30 minutes to 30 seconds, resulting in organizational efficiencies.

WHAT IS ADVANCED RENDERING?

Advanced Rendering technology takes basic document-to-PDF conversion to a higher level by integrating into the most commonly-used Enterprise Content Management (ECM) systems and automating the conversion of content from multiple sources into more manageable and usable formats to enhance documents at each of the 4 stages of the document lifecycle: capture, manage, archive and deliver.

Adlib PDF Enterprise is the next-generation of Advanced Rendering technology that is ideal for high-volume environments where accurate, scalable and highly-available document-to-PDF conversion and transformation services are required across the enterprise.
