◢ADLIB®

Sharing Secure Information Consistently

Adlib provided high-volume document transformation to better support information sharing across the organization, tapping into the SharePoint repository to extract and render legal files.

THE CHALLENGE

A justice department in a North American government was looking to develop a PDF solution that enables fast and accurate PDF rendering for legal files in different formats. These files need to be shared across multiple departments using the existing document repository—Microsoft® SharePoint®.

They were faced with a number of difficult challenges. This organization needed to:

- Deal with numerous file formats
- Address high volume demands
- Integrate with SharePoint
- Ensure secure storage, file sharing and file search

THE RESULT

Adlib excels at interoperability with document repositories, including SharePoint. This government organization used high-volume document transformation to better support information sharing across the organization, tapping into the SharePoint repository to extract and render legal files.

By using Adlib PDF, this government organization was able to achieve a number of benefits:

✓ One consistent format for all files—PDF

✓ Implementation of an automated rendering solution to process high volumes of documents

✓ Integration of the PDF rendering solution with SharePoint, which provided secure storage, file sharing and file searching

Advanced Rendering enabled this government organization to integrate with SharePoint to convert large volumes of legal documents to PDF.

WHAT IS ADVANCED RENDERING?

Advanced Rendering technology takes basic document–to-PDF conversion to a higher level by integrating into the most commonly-used Enterprise Content Management (ECM) systems and automating the conversion of content from multiple sources into more manageable and usable formats to enhance documents at each of the 4 stages of the document lifecycle: capture, manage, archive and deliver.

Adlib PDF Enterprise is the next-generation of Advanced Rendering technology that is ideal for high-volume environments where accurate, scalable and highly-available document-to-PDF conversion and transformation services are required across the enterprise.
