

Eliminate The Risk of Dark Data.

Gain Deeper Insight into Risk, Compliance & Business Performance

With Adlib, addressing contractual and compliance risk is no longer a game of guesswork. Adlib's Contract Analytics software streamlines contract review, helping you rapidly pinpoint opportunity and risk. Using powerful AI and our proven understanding of complex document types, our solution identifies and extracts key contractual elements for you, with a high degree of accuracy too. You don't need to be a tech wizard to use our solution either. Our trainable AI models and Citizen Data Scientist approach make it easy for anyone—even the least technically inclined—to use our platform. It's simple: You access the information, language, and clauses you need, when you need to, while decreasing the time and cost of manual contract review. So you can respond to shifting regulations and get maximum ROI on your agreements, minus the admin headaches.

Accelerate Time to Answers with Better Data

1 DISCOVER

Reviewing contracts is a time-consuming process. Unless you can find and bring together all your agreements, you can't answer pertinent questions, like: "Which contracts contain a negative covenant clause?" or "Which contracts are impacted by force majeure?" Contract documents are often inconsistent in format, non-searchable, duplicated, spread over a variety of sources, and buried amidst non-related content. Adlib expedites this step in the review process by automating the discovery and upfront analysis of your content.

3 SEARCH & REVIEW

Review of a single contract or group of contracts can be cumbersome, even if you can segment and identify key information in a collection of contracts. Without the right software, contract review can be extensive and inaccurate. With enriched contracts and robust reports, you resolve the unknowns and gain total visibility into your agreements. By understanding contract analytics, document types, clause presence, and attribute information, Adlib automatically marks critical documents for processing, fast-tracking the contract review process.

2 ANALYZE & ENRICH

Once discovery is complete, it's time to identify contract types, clauses, terms, and obligations to understand the risk and opportunity they represent. Without the right software, this is no easy feat. This is especially true if you hold a large set of third-party contracts that require more detailed analysis. This can lead to heavy manual effort and delays answering even the simplest questions, like: "Which of my contracts are active?" Adlib enriches your contracts and helps you resolve the unknowns, shortening the time from contract review to intelligence.

4 DELIVER

Contract Analytics is fundamental to understanding risk and identifying opportunities. The data and insights gathered can define the strategy that impacts the success of the business. Without a robust Contract Analytics software, consolidating and sharing learnings would be complex and painstaking, and much of the benefits from the effort could be lost. With Adlib, valuable content can be easily delivered and shared with the people and processes who require it, in virtually any format.

Solution at a Glance

- Compatible with 300+ file types, including legacy & specialty formats
- Leverages powerful AI + proven understanding of complex contract types
- Expedites contract discovery, review & analysis
- Identifies & extracts key contractual elements with a high degree of accuracy
- Allows you to quickly access & review contract language + clauses
- Decreases the time & cost of manual contract review
- Automatically marks critical documents for processing, fast-tracking contract review
- Allows you to share content with the people and processes who require it, in virtually any format
