# Adlib

Transforming for the Digital Future

Experience a New Level of Speed, Simplicity & Scalability

Adlib continues to help global enterprises harness the true power of data with our content intelligence capabilities. To ensure our technology meets evolving market demands and customer needs, we have enhanced our platform. Introducing the most flexible, scalable version of Adlib yet. Our newest release supports the cloud-first strategies of our customers. It also provides more cost certainty with volume-based pricing. With new capabilities—including modularization, standardization of software code, and extended integrations—you can more easily adapt, refresh, and integrate the solution into your business. Rest assured, we continue to facilitate the creation of searchable, high-fidelity PDF content that's fit for deeper analysis, archival, and storage.

PLATFORM ENHANCEMENTS

- Enjoy a SaaS offering + scale instantly to meet changing needs
- Save valuable processing time & enjoy a more flexible experience
- Customize for a lower cost
- Get a better handle on legacy & business-as-usual content
- Simplify admin, processing & troubleshooting
- Discover, process & deliver content across repositories (vs. one repository only)
- Accelerate time-to-value & easily process documents with pre-built connectors

With Adlib we can pull insights from complex documents we couldn't discover before. This opens up endless possibilities for our customers–and our business.

– Keith Parent, Founder & CEO, Court Square Group

Enhanced Capabilities

SaaS Offering
Utilize Adlib without the worry of managing, upgrading & administering the system—significantly reducing IT time & effort.

Scalable Infrastructure
Scale instantly to meet changing document volumes or new business needs—without having to procure & deploy new infrastructure.

Flexible Workflows
Leverage customizable workflows to add simplicity, intelligence & speed to all your processes.

Document Discovery
Discover documents from virtually any source, eliminating duplicate, trivial & obsolete data from processing.

Expanded Connectors
Connect to more content repositories out-of-the-box & access more of the data that matters to you.

Adlib is now available as a SaaS offering. We deploy the software, manage upgrades, and monitor performance for you. We provide comprehensive access controls and auditing too. With high-performance computer storage and networking, Adlib runs up to 5x faster than other public clouds, for a solution that's as speedy as it is scalable.

With Adlib, there's no need to deploy new infrastructure to meet changing document volumes or new business needs. Simply scale a single engine as demand dictates. The latest version of Adlib supports vertical scaling using multiple CPUs on a single server, as well as quick horizontal scaling if needed. It's a truly flexible solution that adapts with your organization.

Adlib gives you broader access to engine features, with decision criteria within a workflow. By aligning with your unique business logic, you save valuable processing time and enjoy a more flexible experience. We have also separated key features into individual engines, giving you more flexibility in the implementation of a given process. That means you can customize for a lower cost too.

With Adlib, now it's easier to deal with legacy and business-as-usual content. By applying content views, Adlib discovers documents from virtually any source and eliminates duplicate, trivial, and obsolete data from processing. Adlib can also scan repositories to gather disbursed documents, facilitating the centralized search and access to content. A more robust user interface means that admin, processing, and troubleshooting is easier for you now too.

Accelerate time-to-value and easily start processing documents with these pre-built connectors: Box, Salesforce, BluePrism, Egnyte, OpenText, Exchange, Google Drive, and Automation Anywhere.

Don't see your connector? Adlib can now build connectors to any content repository, delivering access to more of the data that matters to you. Adlib can also discover data from one content repository, process it, and deliver it to entirely different repositories.
