

OPPD Works Towards Zero Incidents with Vector EHS

your energy partner®

About Omaha Public Power District

OPPD is a public electric utility serving more than 369,500 customers in Omaha and 13 surrounding counties in southeast Nebraska. OPPD's mission is to provide affordable, reliable and environmentally sensitive energy services to their customers.

Vector Solutions worked with Omaha Public Power District (OPPD) to implement incident, near miss, and observation reporting, allowing OPPD to focus on risk factors to reduce incidents.

The Challenge

OPPD desired one safety management system to track, analyze, and report on its fragmented safety data.

OPPD wanted to create a safety culture that rewarded its 2,000 employees for reporting near misses, good catches, and behavior based safety observations and required an easy to use software tool to enable this reporting.

The Choice

Working with Vector Solutions, OPPD was able to configure Vector EHS modules to allow for easier reporting and analysis of near misses, good catches, injury prevention, and observations. And they were able to easily scale this across their operations.

The Solution

- Easily maintain safety data in an online and centralized database that allows for quicker retrieval and analysis.
- Simplify calculating key safety metrics across divisions, locations, and business groups.
- Become more proactive by helping focus frontline employees on reporting and taking proactive, corrective actions.

“We are excited about the product, which will help us on our quest to achieve zero injuries at OPPD.”

Traci Schuette

Supervisor, Safety Analytics & Administrative Support, Omaha Public Power District

Modules Utilized

- Incidents
- Hazards
- Observations
- Inspections
- Hazard Public Web Form
- Dashboards
