

K8 eReceipts - Rapid and accurate goods receipt in branch and in warehouse

A simple to use, yet powerful digital solution to enable you to book receipts from purchase orders immediately into stock and manage any issues found.

For use both in branch and in a busy warehouse, K8 eReceipts allows you to swiftly and accurately book in goods.

Getting the goods to the customer on time is key to the success of your business. Making sure that you have received the correct goods from your supplier and that they are immediately available for processing and onward despatch to meet your commitments is vital.

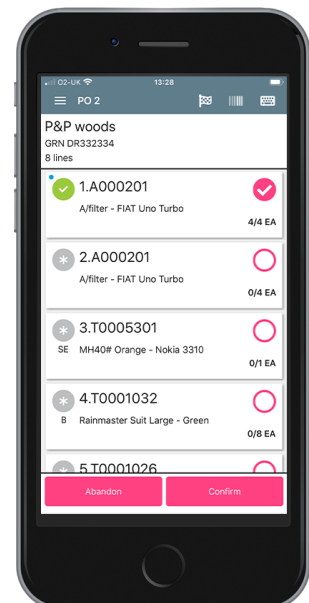

Recording a goods receipt from a supplier can be a time consuming task. Apart from the manual

checking of goods at the point of receipt, noting discrepancies on the paperwork, there is then the need to update your back office system to record the receipt. If you need to get the goods out quickly to your customer, this can cause unnecessary delays. With the multiple steps involved, there is room for error in processing the receipt that can lead to both stock accuracy and invoice processing problems.

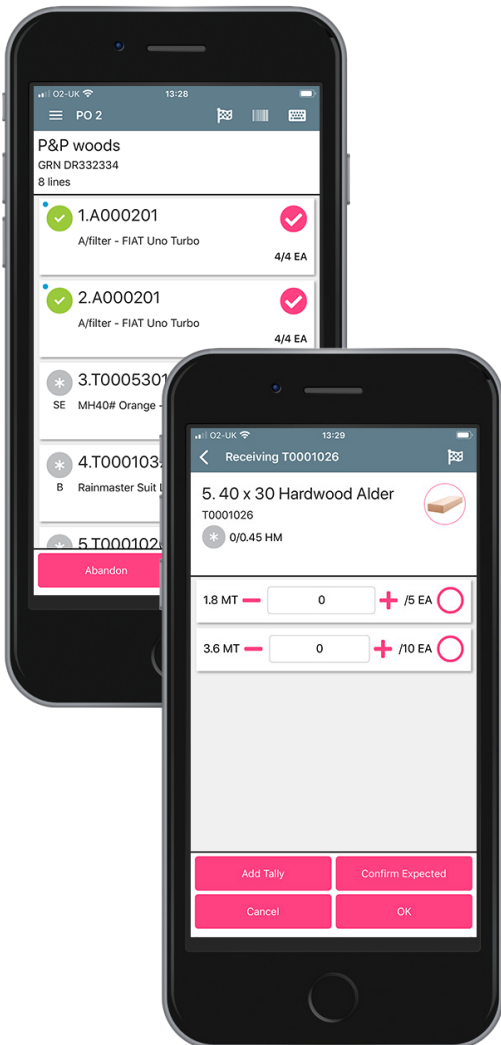

K8 eReceipts is designed to make it simple for your staff to process receipts quickly and efficiently. This easy to use app provides all of the features that you need to book in receipts from purchase orders.

Key Benefits

- Simple to use, yet powerful app, to enable receipt from a purchase order
- All details of expected receipt downloaded to app for ease of processing
- Multiple users can book in a single purchase order
- Scan products or manually update quantities
- Immediate notification to the right people of any issues found
- Automatic update of received products and quantities within K8
- Suggested putaway instructions available once receipt is processed

Product Datasheet

The purchase orders are simple to find and select and all the details that you need to action the receipt – products, expected quantities, barcodes, etc – are all immediately downloaded to the app.

The app can then operate in offline mode until the receipt is to be confirmed. This means that you can process receipts in areas where your network coverage may not be that strong, such as in a yard. You can also allow multiple users to book in receipts from a single purchase order, which enables you to quickly check and book in larger deliveries. Once completed, the app informs the users which bins to place the products in.

It's simple to scan a product to verify accuracy, or to manually update the received quantities. The user can simply record any issues found whilst working on the receipt e.g. supplier has delivered less than they have stated, or the goods were damaged. Once the receipt has been confirmed and the relevant purchase order has been automatically updated, immediate notifications are generated and directed to the right member of staff to resolve any problem. All of the data and images captured are automatically loaded into K8 and are visible to the staff that need to take corrective action. No more waiting for the paperwork to be returned to find the problems, they are highlighted for immediate action and resolution.

The user does not need to remember if additional details need to be captured and verified, such as batch/pack, serial numbers or tally breakdown for timber receipts – they are prompted to capture this detail for the relevant products. Should you use two stage receipting, where the supplier provides advance notification of the expected delivery of products and quantities, these receipts can be easily confirmed and processed.

With K8 eReceipts, you can now ensure that you have the goods available for processing and onward delivery as soon as they arrive and any problems found are immediately in hand – no more delays!

About Kerridge Commercial Systems (KCS)

KCS provides advanced, fully integrated business systems, installation and support services for the manufacturing, wholesale and distributive markets. The company has over 40 years of extensive knowledge and experience of working with wholesalers, distributors and manufacturers across many sectors. The company's class leading solutions are functionally rich and highly flexible.

The KCS product solution set has a track record of delivering wide-ranging benefits including greater operational efficiency, cost savings and resource and asset utilisation, together with real-time information for management decision making.
