

K8 eReceiving – Rapid and accurate goods receipt in branch

A simple to use, yet powerful digital solution to enable you to receive inventory from purchase orders immediately into stock and manage any issues found.

Getting the goods to the customer on time is key to the success of your business. It is vital to make sure that you have received the correct material from your supplier and that it is immediately designated as available inventory to meet your commitments.

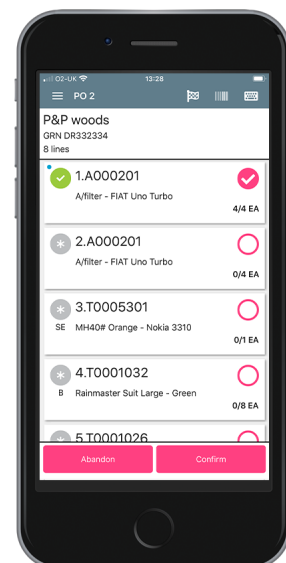

Recording receipt of goods from a supplier can be a time-consuming task. Apart from the manual checking of inventory at the point of receipt and noting discrepancies on the paperwork, there is then the need to update your back-office system to record the receipt.

If you need to get the material out quickly to your customer, this can cause unnecessary delays. With the multiple steps involved, there is room for error in processing the receipt that can lead to both stock accuracy and invoice processing problems.

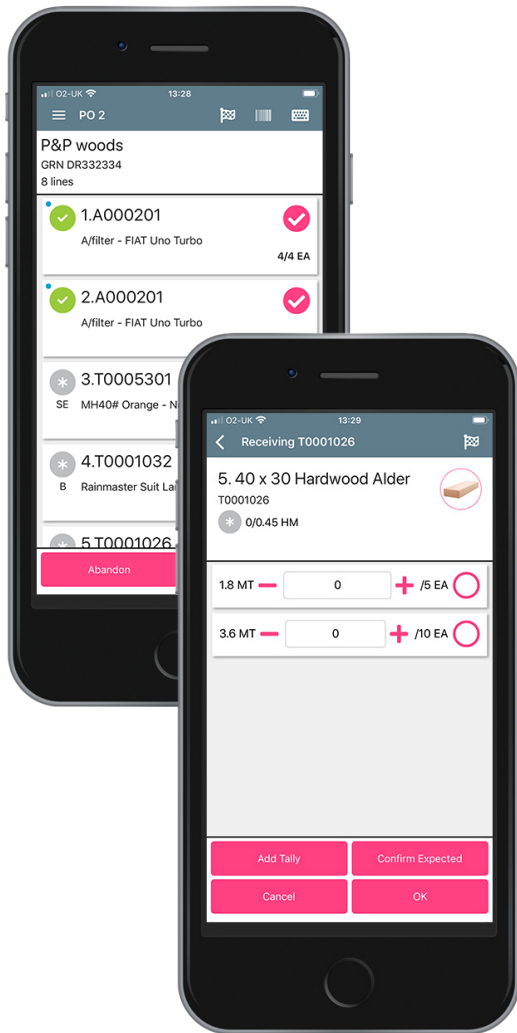

K8 eReceiving is designed to make it simple for your staff to process receipts quickly and efficiently. This easy to use app provides all of the features that you need to book in receipts from purchase orders. Purchase orders are easy to find and select and all the details that you need to action the receipt - products, expected quantities, barcodes, etc – are all immediately downloaded to the app.

Key Benefits

- Simple to use, yet powerful app, to enable receipt from a purchase order
- All details of expected receipt downloaded to app for ease of processing
- Multiple users can book in a single purchase order
- Scan products or manually update quantities
- Immediate notification to the right people of any issues found
- Automatic update of received products and quantities within K8
- Suggested putaway instructions available once receipt is processed

Product Datasheet

The app can then operate in offline mode until the receipt is to be confirmed. This means that you can receive material in areas where your network coverage may not be that strong, such as in a yard. You can also allow multiple users to receive inventory from a single purchase order, which enables you to quickly validate and receive larger deliveries. Once completed, the app directs users to the appropriate bin location.

It's simple to scan a product to verify accuracy, or to manually update the received quantities. The user can simply record any issues found while receiving e.g. supplier has delivered less than stated, or document damaged goods. Once the receipt has been confirmed and the relevant purchase order has been automatically updated, immediate notifications are generated and directed to the right member of staff to resolve any problem.

All of the data and images captured are automatically loaded into K8 and are visible to the staff that need to take corrective action. No more waiting for the paperwork to be returned to find the problems, they are highlighted for immediate action and resolution.

The user does not need to remember if additional details need to be captured and verified, such as batch/pack, serial numbers or tally breakdown – they are prompted to capture this detail for the relevant products. Should you use two stage receipting, where the supplier provides advance notification of the expected delivery of products and quantities, these receipts can be easily confirmed and processed.

With K8 eReceiving, you can now ensure that you have the inventory available for processing and delivery as soon as it arrives and any issues found are immediately – no more delays!

About Kerridge Commercial Systems (KCS)

KCS provides advanced, fully integrated business systems, installation and support services for the manufacturing, wholesale and distributive markets. The company has over 40 years of extensive knowledge and experience of working with wholesalers, distributors and manufacturers across many sectors. The company's class leading solutions are functionally rich and highly flexible.

The KCS product solution set has a track record of delivering wide-ranging benefits including greater operational efficiency, cost savings and resource and asset utilization, together with real-time information for management decision making.
