

The Benefits of Using VMware With Automation Software

This 30 minute webinar will provide an overview of the issues around using VMware with automation software. You will leave with a keen understanding of how to configure network connections to the real world.

Topics that will be discussed:

- Overview of VMware
- Networking supported in VMware
- Required network settings to make use of VMware
- Transferring files to the host computer

If you are an engineer supporting multiple versions/brands of software, this class is ideal for you.
