

Enterprise Cybersecurity Program Review

Identify and mitigate complex security threats with an Enterprise Security Program Review

Unlimited Technology, Direct Defense, Exero, and IronNet Cybersecurity have partnered together to mitigate the risks that all enterprises face today. As part of this partnership, IronNet has co-developed the Enterprise Security Program, which takes the current and desired future state of the client's infrastructure and measures it against the National Institute of Standards and Technology (NIST) cybersecurity controls (800-53, 800-171).

The program will assess, test, and review already existing security controls, analyze the risks an organization is exposed to, and help implement security controls that make the best business and fiscal sense.

The reality of cybersecurity maturity is that it is not a "one and done" process, but rather an ongoing process. Wherever your organization is in its cybersecurity lifecycle, we can engage with you at any step of the process, analyze the controls in place, and make effective recommendations to advance your security posture.

800%

Increase in attacks during the COVID-19 pandemic

>1,000 pieces

of sensitive data are unprotected at almost half of all companies

\$6,000,000,000,000

is the expected cost of cybercrime to be exceeded by 2021

A Three-solution, Multi-phase Approach

DIRECTDEFENSE

DirectDefense: As the ESPR Assessor and an MSSP for IronNet customers, we provide consultative and strategic services to coordinate assessment, project planning, implementation, and management of your Enterprise Security Program Review

Exero: Bridge your identified security gaps and receive proactive and automatic response capabilities with Exero, health-based monitoring provided through Unlimited Technologies.

IronNet: IronNet's mission is to deliver the power of Collective Defense to defend companies, sectors, and nations. Our Network Detection and Response (NDR) solution gives customers the full picture of their enterprise's security, and directly relates to the U.S. Executive Order 13800.

Enterprise Security Program Review Phases:

01. Assess Current State of Security

This is not your typical risk assessment. Receive an assessment of your organization's current security posture and detailed guidance for centralizing your critical data and network infrastructure.

02. Develop a Plan

Obtain a risk-based priority list tied directly to the NIST 800-53 or NIST 800-171 frameworks for a measurable, sustainable, mitigative approach.

03. Implement the Plan

Don't perform another useless security review. With an Enterprise Security Program Review, you get highly specific implementation guidance and the ability to see the impact of remediation choices in advance. Ensure compliance and meet regulatory requirements, all while gaining visibility into security threats.

04. Employ a Third Party for Review

Acting as an impartial third party, DirectDefense applies consultative services to provide thorough reviews of the existing infrastructure, including Exero and IronNet solutions and performance, ensure compliance with the NIST standards, and help you maintain a secure infrastructure even as the threat landscape changes. This offering is truly an enterprise-wide approach to multi-tier security.

Direct Defense, Exero, and IronNet Make it Happen

Leveraging industry-standard frameworks will help improve your overall security posture. The current and immediate threats can only be addressed using a comprehensive assessment, real-time AI for threat visibility, a fully-active Health-based Monitoring platform running on your entire network, and a third party to ensure compliance and consistency in your security solutions.
