

# ICC Code Connect API

ICC Code Connect API is a seamless solution for *Integrating ICC Code Content directly with your organizations existing workflow application.*

## How ICC Code Connect API Works:

Code Connect API establishes a direct connection to ICC's codes and standards from within an organization's workflow tool:

*Search and import the latest codes within your building code software*

*Streamline common code references within your portal or workflow tool*

*Quickly copy and paste code content into correction letters and other review documents*

*Avoid mistakes when capturing code citations manually from outdated print or PDF files*

*Automatically link a section reference to the complete section text*

*Integrate content directly onto the screens your team works*

## Content Licensing Pricing

*ICC provides annual subscription price for access to code contents by title*

- Jurisdiction cost determined by population and quantity of titles
- Vendor/Company cost determined by employee size and quantity of titles
- Allow clients to utilize existing content license key across multiple vendors
- *Additional content offerings added to Code Connect API upon market interest*
- *eCode360 API available for jurisdictions with eCode360 instance*
