

ORCHESTRATION RESILIENCE DIGITAL DEXTERITY

WITH

CLOUDSOFT | AMP

Customer's digital expectations are rapidly shifting. To meet them, banks adopt new approaches to developing digital products and services. This means breaking down the wall between Developers and IT Operations.

A service-oriented approach

Bring the agility of cloud DevOps to traditional Infrastructure teams, allowing enterprises to compose services, deploy them on the most appropriate environment and share these components with the business for reuse and adaptation. However, successful delivery in complex enterprises requires an orchestration platform and developer guardrails to ensure compliance, resilience and security.

INTRODUCING CLOUDSOFT | AMP

Cloudsoft AMP is recognised by Gartner as a **digital platform conductor (DPC)** helping to tame hybrid IT complexity with powerful orchestration capabilities. AMP's blueprints and policies allow developers to choose from, and contribute to, agreed templates for provisioning, deployment, recovery and more. AMP orchestrates your services and applications throughout their full lifecycle, works in any environment (whether public cloud, on-prem, private cloud, containers or VMs) and its dashboards surface the application health and compliance metrics you need.

This level of orchestration requires 360° visibility, which is why AMP sits above your existing automation and ITSM tech, integrating with them to provide an accurate and accessible picture of your whole environment and its constituent services.

Orchestrates services across environments, regardless of location.

Provides centralised control, governance & visibility; top-down, not bottom-up

Composes business services from your blueprints and policies catalogue

Ensures critical services are always up and compliance can be demonstrated

SUCCESS STORY GLOBAL TIER 1 BANK

A Global Tier 1 bank use Cloudsoft AMP's composable approach to orchestrate their services. Developers use AMP to describe the different components of application services, databases, or other resources, and for each of them set up the healthy endpoint and the parameters for healing them in the event of disruption.

Implemented as a critical resilience platform, Cloudsoft AMP has also delivered:

reduction in recovery time

zero touch application management

reduced person hours

"I feel fortunate to have met a tool like AMP on my journey"

EXECUTIVE DIRECTOR, TIER 1 BANK

"Technology leaders need tools that will work with what they already have, can meet them at their current level of maturity, and are flexible enough to adapt as they improve and as their needs change. DPCs are the answer"

ROGER WILLIAMS, GARTNER
