

Overview

Founded:	2015
Co-founders:	Zac Duff and Numa Bertron
Headquarters:	Melbourne, Australia
Key Investors:	Rampersand (AUS), Investible (AUS), BoostVC (USA), General Catalyst (USA)
What we do:	"Making spatial presentations easy"

Apps:	JigSpace Jig Workshop
Availability:	Globally on iPad or iPhone via the AppStore
Price:	Free (Jig Workshop users can upgrade to monthly 'Pro' subscription)
Downloads:	3,000,000+
AppStore Rating:	4.8/5 stars
CAD file support:	STEP, STP, STL, OBJ

Who uses JigSpace and Jig Workshop?

People use the free **JigSpace app** to learn about complex scientific, technical or historical concepts in augmented reality. We call these spatial presentations 'Jigs'. Learning how jet engines work, what coronaviruses are or exploring space with NASA probes can take place in the classroom, office or living room.

Jig Workshop is software that enables anyone to create and share interactive 3D presentations, like *Canva* or *PowerPoint* for 3D. Popular use cases include augmented reality prototyping in lean manufacturing, remote product demonstrations and remote product training in spatial-focused industries like manufacturing and engineering services.

Jig Workshop is used by large companies like medical device maker Medtronic and Hino Trucks for its collaborative features and organization-wide scalability. Niche manufacturers like Swoop Aero (drones) or Triangle Waterquip (filtration) cite its ease of use for non-technical users.

Jig Workshop prioritizes sharing of 3D presentations in a variety of formats. Users can host up to 20 remote participants in an interactive 'Live Presentation'. Students can use this to create and share engaging projects with their classmates remotely. Companies use Jig Workshop to demonstrate and develop 3D products with interaction from customers, remote colleagues or stakeholders.
