

PRODUCT OWNER JOB DESCRIPTION

Who We Are

Yabble is a high growth SaaS company developing industry leading software in the market research sector. Our vision is to create enriched data for research delivering the best value for both buyers and sellers of data.

Making data brokerage transparent, secure and seamless, Yabble has just raised its first round of capital. This capital is supercharging our team and fuelling our tech build, with cutting edge AI driven products about to come to market.

You'll be joining a growing, highly motivated and internationally focused team.

Your New Job

The Product Owner understands the business problem that needs to be solved and assists in communication & clarifying business requirements for the delivery teams. The Product Owner helps the business implement technology solutions by determining business requirements and communicating them clearly to stakeholders, facilitators, and partners.

Core Responsibilities include

- Understands the business problem that needs to be solved, documents it, and works with relevant stakeholders to provide solutions
- Identifies the potential impact on new and existing processes
- Gathers requirements and ensures user stories are written clearly, reflecting business proposition with appropriate acceptance criteria
- Is the customer advocate for the team
- Works with the stakeholders to establish what is required and how it impacts them
- Investigates, researches, and validates the background for user stories (including understanding the system from the past, present, future perspective)
- Ensures the user story reflects the Product vision
- Understands test cases to ensure they reflect the story and have relevant acceptance criteria
- Supports Senior Product Lead / CTO on requirements validation
- Is the point of contact for the Development team on User Story and Acceptance Criteria clarification

- Supports manual testing and champions best practices for testing
- Communicates with the commercial team on deployments that impact users
- Supports the building of Product roadmaps and ensuring the roadmaps adhere to strategy

Requirements

- Prior experience in a Product Owner, Business Analyst, or Product Designer role
- Prior experience working in a collaborative team consisting of designers, developers, QA, and product
- Experience in eliciting requirements through agile methods, for example, workshops and 'how can we' thinking
- Experience in an agile environment
- Experience in Lean design, and agile methods, and writing user stories an advantage
- Experience using JIRA for product development
- Strong communication skills and the ability to create clear technical requirements

About You

- You are a team player and a great communicator
- You have great command of the English language, both written and spoken
- You have exceptional attention to detail
- You have a strong desire to create something new, novel, and revolutionary
- You want to use your skills in a creative, caring, and empowering environment
- You have a growth mindset, ready and willing to learn on the job
- You have a great work ethic
- You embody “Every new task is better than the last”
- Dedication is your middle name!
