

TERMOLITA HORTIPERL

HORTICULTURAL PERLITE

BLEND:

Hortiperl is Expanded Mineral Perlite, Milled Perlite, Perlite Ore

SIZE OPTIONS:

- 4.4 CU
- G - #2 Perlite
- XG - #3 Perlite

BENEFITS:

- Substrate with uniform absorption
- Chemically inert and free of salts
- 100% Sterile
- Ultralight
- Eliminates abrupt variations of temperatures in roots of plants

BEST USE:

Perlite is more porous and tends to allow water to drain more readily. As such, it is a suitable addition to soils utilized with plants that do not require very moist media, such as cactus, or for plants that generally thrive in well-draining soil. Due to perlite's large surface area, it is a good choice for plants that require levels of high humidity. Evaporation of its surface area creates higher humidity levels.

APPLICATION USAGE:

- Potting Soil - Mix 5%-20% by volume with organic substrates such as coir, peat moss, compost, or soil
- Hydroponics - Use 100% or mix 50% by volume with peat moss or sterile substrate
- Seedlings - Mix 30%-50% with peat moss
- Root Cuttings - Use 100% or mix 50% by volume with peat moss
