# Supercharge Performance, Drive Innovation and Enhance Security with DevOps

Six Degrees and Synetec employ an agile DevOps approach to supercharge application performance, enhance business continuity and deliver constant innovation that enables your organisation to adapt and thrive in the new normal.

Six Degrees' secure, cloud-led infrastructure services underpin Synetec's bespoke software expertise. Leverage our joint capabilities to deliver the best possible application services to your end users and clients.

## Client Challenges

| Challenge | Solution |
|---|---|
| "We're struggling to keep pace with user demands when it comes to application improvements and enhancements, and we're uncovering issues with shadow IT as a result." | Meet changing demands with an agile approach. Drive continuous innovation with rapid deployment of application improvements to delight end users and customers. |
| "Our users are frustrated by the poor responsiveness of our applications." | Support users with adoption and deliver high-performance applications that won't slow them down. |
| "New ways of working have raised questions about the best way to deploy our applications." | Enable secure access anywhere, anytime, on any device with applications designed to support modern ways of working. |
| "We're concerned about the security of our applications." | Protect your organisation against malicious hacks by ensuring applications are secure by design. |
| "We're tied to a legacy application and are struggling to maintain and evolve it to meet our current and future business needs." | Prepare and migrate your application to the public or private cloud that's right for you, enabling you to access truly transformational performance, security and innovation benefits. |

**Enabling your brilliance**
