

Central Government Department

Six Degrees enables a Central Government department to enhance its cyber security posture by leveraging its Microsoft 365 E5 licence

Advisory-first approach

Flexible commercial terms

Rapid mobilisation

Enhanced cyber security posture

Vertical: Central Government

Solution Overview: Six Degrees was commissioned by a large Central Government department to configure its existing Microsoft Azure Sentinel instance, available through its Microsoft 365 E5 licence. Prior to engaging with Six Degrees, Azure Sentinel was switched on but not being used because the department lacked the in-house skills to onboard key infrastructure assets.

Six Degrees was asked to work collaboratively, share knowledge, and produce operational manuals and 'how to' guides to help train the department's internal analysts. By taking an advisory-first approach, mobilising quickly, and offering flexible commercial terms, we have enabled a fuller use of the department's E5 license and enhanced its cyber security posture.

The Central Government Department's Story

Six Degrees acts as a trusted partner to the Central Government department, guiding it on its cyber security journey and ensuring it aligns its security posture to the evolving threat landscape

The department acknowledged an internal skills gap that was preventing it from leveraging Azure Sentinel security capabilities available through its Microsoft 365 E5 licence, and needed expertise to configure the solution

Six Degrees and Microsoft worked collaboratively on a successful proposal to the department to make deeper use of its E5 licence by deploying, configuring, and tuning Azure Sentinel

We continue to work with the department to build its in-house cyber security skills and awareness, enabling it to take a more active role in owning its own security posture to ensure it continues to make full use of its E5 licence

Why the Department Works with Six Degrees

We maintained an advisory-first relationship with the department, delivering strong pre-sales services and demonstrating added value

Our Azure Expert MSP status and deep cyber security heritage gave us credibility and established our credentials as a trusted advisor to the department

As an Azure Expert MSP, the department expected deep secure cloud expertise from Six Degrees. We demonstrated this from the very first engagement

We were able to mobilise services within a tight timeframe, mobilising within eight weeks to meet the department's tight timelines
