CLOUD FIREWALL SERVICE

Our Cloud Firewall service offers a range of virtual appliances, providing high performance, secure and scalable firewall services for your cloud infrastructure.

Delivered as a managed service, Cloud Firewall provides perimeter security and resilience for multi-cloud solutions with comprehensive monitoring, management and change control, offering advanced functionality such as URL filtering, threat intelligence and high availability.

Cloud Firewall Service Benefits

Recover your emails and files easily from your backup if they get deleted or corrupted.

Daily backups reduce the amount of repeat work needed to recover files from their backed-up state.

Simple to use search functionality in the backup portal and one click restore option to recover your lost data in seconds.

Cloud Firewall Service Features

Delivered as a Managed Service

Our cloud firewalls provide a fully monitored and managed solution, providing robust perimeter security.

High Availability Pair

Available as an option, cloud firewalls can be configured as a high availability pair – providing seamless failover in the event of a single appliance failure, ensuring no access interruptions to your cloud services.

Beyond Cloud

Secure Inter-Site Connectivity

Site-to-site VPN functionality supports a broad range of IPSEC standards including IKEv1/v2. This enables secure connectivity between sites based on industry standard technologies.

Threat Intelligence

Threat intelligence provides intrusion prevention system (IPS) functionality with live updates to block network-borne exploits, protecting your organisation.

URL Filtering

URL filtering is a highly configurable cloud-based web filtering service integrated with the cloud firewall appliances. With fully customisable categories and schedules, this service provides granular web filtering for your user base. This enables monitoring and blocking of websites that could impact your organisation through malware distribution, along with control over access to non-work-related sites and social media.

Cloud Firewall Service Tiers

Feature	Essential	Advanced	Premium
High Availability	●	●	●
Stateful Inspection Firewall	●	●	●
NAT	●	●	●
Site-to-Site IPSEC VPN	●	●	●
App-ID	–	●	●
Threat Intelligence	–	●	●
URL Filtering	–	●	●
Remote Access VPN	–	●	●
Perimeter Firewall	–	–	●
