

DISASTER RECOVERY (DR) MANAGEMENT SERVICE

Maintain business continuity and protect your organisation in the event of a disaster.

Implementing disaster recovery into your strategy can minimise service interruptions through the failover and failback of multi-cloud disaster recovery plans for planned migration, disaster avoidance and disaster recovery. The Disaster Recovery (DR) Management service delivers Infrastructure as a Service (IaaS) and Platform as a Service (PaaS) continuity management for your organisation.

Following a comprehensive analysis of your organisation's infrastructure, including asset inventories and through cloud assessments, Six Degrees will build a disaster recovery plan and guide you through the most appropriate disaster recovery offerings to suit your organisation's requirements.

Six Degrees will provide managed support services for your geo-redundant disaster recovery site environments, providing rapid recovery upon any failures of your infrastructure.

DR Management Service Benefits

Minimise the impact of potential disruptions that may arise as a result of disasters.

Resume operations quickly through a replication of workloads and failback between your organisation's sites.

Affordable and efficient, cloud-based disaster recovery for any application, data and cloud service.

DR Management Service Features

Ensure comprehensive disaster recovery plans to maintain business continuity.

Six Degrees will analyse and evaluate your infrastructure to build a disaster recovery plan that supports your organisation by minimising potential downtime should you experience any disasters.

Minimise service interruptions.

As part of the service, Six Degrees will retain all valuable data in your private and/or public cloud for up to 24 hours, ensuring that an appropriate recovery point is available in the event of a disaster.

Continual monitoring to ensure optimal recovery points.

Six Degrees will monitor disaster recover replications, and will remediate if replications fall outside of agreed recovery point objectives. This ensures that your disaster recovery provisions are ready to react should any disasters affect your organisation's operations.

Protect your resources from potential disasters.

With the DR Management service you can amend the infrastructures that are included as part of your disaster recovery plan, ensuring that any new environments are protected from potential disasters.
