

MICROSOFT 365 BACKUP SERVICE

Peace of mind that your Microsoft 365 data is recoverable after accidental or malicious deletion.
Beyond Cloud.

The Microsoft 365 Backup service offers off-site cloud backups of your Microsoft 365 data so that lost or corrupted files can be recovered easily should users accidentally delete valuable information, or you become victim to a malicious cyber-attack.

The Microsoft 365 Backup service provides automated backups to ensure that your organisation does not lose any valuable data through accidental deletion or malicious threats. With the Microsoft 365 Backup service, data can be backed-up on-demand or automated for all licensed users.

Microsoft 365 Backup Service Benefits

Recover your emails and files easily from your backup if they get deleted or corrupted.

Daily backups reduce the amount of repeated work needed to recover files from their backed-up state.

Simple to use search functionality in the backup portal and one-click restore option to recover your lost data in seconds.

Backups stored within the European Economic Area.

Microsoft 365 Backup Service Features

Backup your Microsoft 365 data.

The Microsoft 365 Backup service covers Exchange Online, Calendars, Contacts, OneNote data in SharePoint and OneDrive document libraries, SharePoint Sites, Custom Collections, and Team Sites.

Protect your organisation from accidental or malicious data removal or corruption.

Recover lost data by restoring it from the Microsoft 365 backup, which is stored in a separate location to your business-as-usual data, including files or emails that were accidentally deleted or subject to a malicious cyber-attack that may have corrupted your data.

View logs of activity in your backup.

Your data is stored in a private cloud with built-in redundancy and encryption. For peace of mind, access a full record of all backups and restores, including who requested them and where the data was restored to, from the backup dashboard.
