SQL SERVER MANAGEMENT SERVICE

Our SQL Server Management service offers enhanced management and monitoring for SQL Servers across multi-cloud environments. Providing detailed performance management, the service ensures your mission-critical SQL Servers are delivering optimal performance.

As an addition to our comprehensive Server OS Management service, SQL Server Management extends performance monitoring and management into your SQL Server estate. When delivered together, Server OS Management and SQL Server Management provide end-to-end monitoring and management across your entire Windows Server estate.

Providing clarity on SQL Server performance and working alongside your application vendors, we ensure your SQL Servers are configured to deliver optimal performance while providing continuous monitoring to identify potential issues before they impact your business.

SQL Server Management Service Benefits

SQL Server monitoring with deep insight into SQL-specific indices and statistics provides insight into actual database performance, not just the underlying host server.

Through SQL Server patch management, we deliver fully managed patching of your SQL Server in conjunction with your application provider. This eliminates the risks associated with patching mission-critical infrastructures.

SQL Server performance reporting provides an annual detailed report and recommendations to enhance your SQL Server estate.

Working collaboratively with third party application providers ensures we deliver an integrated support service, eliminating time-consuming hand-offs between providers.

Beyond Cloud

SQL Server Management Service Features

Access to DBA Expertise

The SQL Server Management service provides deep level monitoring and management of your SQL Server platform, eliminating the need for in-house DBA expertise.

Optimise Your SQL Server Platform

From backup management to SQL database performance monitoring, our SQL experts ensure your SQL platform performs optimally and supports your mission-critical applications.

Support Across Your Environments

Supporting your production, test and development environments, the service includes secure regression and database refreshes on request.
