

MICROSOFT TEAMS ROOMS

Enable hybrid working
Beyond Cloud.

With an unprecedented number of workers switching to flexible and remote work, hybrid working is set to become the future of the workforce. As more businesses return to the office, employers need to ensure that workspaces are set up to encourage collaboration, drive inclusion, and maintain and foster team bonds.

Enabling effective collaboration starts with transforming meeting spaces, ranging from small huddle areas to large conference rooms, with a rich, collaborative Microsoft Teams experience that is simple to use, deploy, and manage.

With Microsoft Teams Rooms, you can:

-  Run productive meetings when some attendees are in the office and others are remote.
-  Deliver seamless joining experiences with one-touch join.
-  Inspire innovation and drive inclusion by bringing a diverse talent pool to every meeting, wherever your people are based.
-  Enhance productivity with rooms to collaborate and rooms to focus, with the ability to call in specialist support when needed.

Industry-Leading Technology

Microsoft Teams Rooms combines industry-leading Microsoft Teams communication and collaboration software with hardware from some of the best audio-visual vendors on the market, all designed and deployed by Six Degrees' agile working experts.

Teams Meeting Rooms

No matter the size of the space and your requirements for it, we will design and deploy a Microsoft Teams Rooms solution that meets your requirements.

One Person Room

Enable office-based workers to focus and bring in people as required.

Small Room

Work face-to-face but bring in people as required for collaboration.

Mid-Sized Room

Ensure everyone around the table can be heard and seen, while remote workers feel part of the conversation.

Large Room

Maximise coverage for board rooms and larger spaces.

Implementing Microsoft Teams Rooms

Our end-to-end planning, delivery, and operating approach ensures your Microsoft Teams Rooms deployment aligns with your overall Microsoft Teams rollout.

We always recommend an onsite survey, but if this isn't possible for whatever reason a remote video conference along with blueprints/pictures of the rooms is often sufficient. This may limit our ability to spot any problems or issues that may get picked up during an onsite survey.

Once the onsite or remote survey has been completed, we will make recommendations to ensure that your Microsoft Teams Rooms

solution is set up and configured correctly. We can also offer training, if required. Once the solution has been deployed, we can maintain and support the deployment to ensure that it is the right solution for your office space.
